

1

Workshop Outcomes

What you will leave with:

- Insights for how to address the biggest leader decisions for successful AI adoption
- Shared model for succeeding with AI investments and supporting case studies
- Aligned view of your organization's AI adoption strengths and weaknesses
- Identification of your organization's highest-value AI initiatives
- Initial workforce upskilling plan
- List of actions you can take to build your personal **AI leader intuition**

AI-Native Training / © Scaled Agile, Inc.

2

Today's Flow

Morning Sessions	Afternoon Sessions
Welcome and Introduction	AI Strategic Intent & Vision
AI Orientation for Leaders	AI-Native Workforce
The Current State of AI Adoption	*Break*
Break	Human-Centric AI Culture
The AI-Native Organization	AI-Enabled Agility
AI Money Map	Curated Data
Lunch	*Break*
	Governance & Ethics
	Operational AI Technology
	AI-Native Leader Next Steps
	Adjourn

Access your Companion App when you see this icon:

3

Working Agreements

Key points

- Be present
- Respect all voices, one voice at a time
- Take advantage of breaks, return on time (we will start with whoever is in the room)
- **Respect timeboxes**

4

AI-NATIVE LEADER

SESSION 1

AI Orientation for Leaders

What do I need to know about AI as a leader and decision maker?

5

5

What do I need to know about AI?

Leaders need to understand the fundamental concepts, terminology, and techniques related to how AI is commonly used individually and by organizations.

By combining foundational knowledge with frequent hands-on use of AI, **leaders develop intuition** about AI that is vital to decision-making that guides the organization's use of this revolutionary technology.

6

6

The AI Landscape

Generative AI(GenAI) DL that generates new content like text, code	• Creating emails, reports, and research • Creating apps prompts
Deep Learning (DL) ML that finds deeper patterns in very large data	• Image and Facial recognition • Speech-to-text
Machine Learning (ML) A method for AI systems to learn patterns from data	• Fraud detection • Recommendation engines
Artificial Intelligence (AI) Broad field of 'human-like' machine intelligence	• Started in the 1950's • Rules-based if/then decision systems

- AI includes multiple established approaches, many used for years (e.g., ML, DL)
- Generative AI is driving much of today's major disruption and opportunity
- Our focus in this workshop will be Generative AI

7

Beat the AI Challenge

5 min

Prompt: "I have 60 seconds with my CEO/board. How would I explain why Generative AI matters to our business right now?"

1. Write your own answer
2. Then ask the AI the same question
3. How did the AI answer compare to your own?

(You can use the Companion App to complete this activity.)

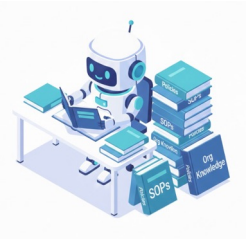

8

LLMs, RAG, Agents and Agentic Workflow

Large Language Model (LLM)

Write a first draft of a press release announcing our new product

Retrieval Augmented Generation (RAG)

What is our company's travel reimbursement policy?

AI Agent
- Goal, Plan, Act w/ tools, Adjust

Prepare a briefing on our top customer before tomorrow's meeting

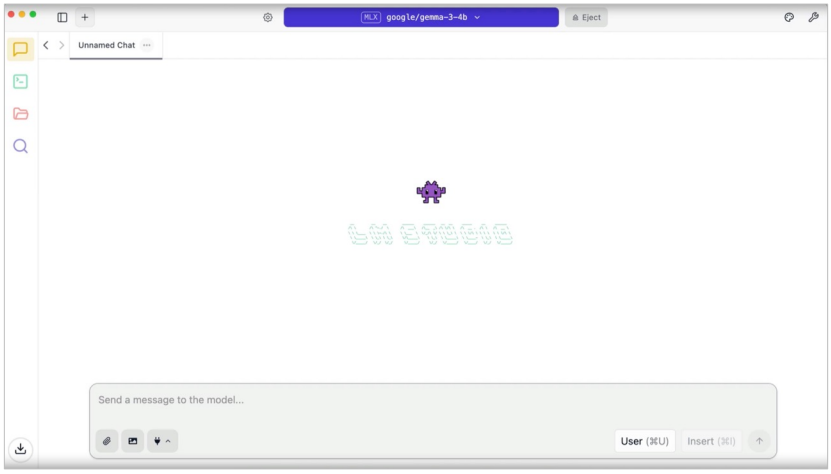

Agentic Workflow

Automate Customer Onboarding: Create Account, Prepare Docs, Schedule Kickoff

Demo: LLM Behavior in Practice

4 min

Watch video

Quick Discussion – LLM's

3 min

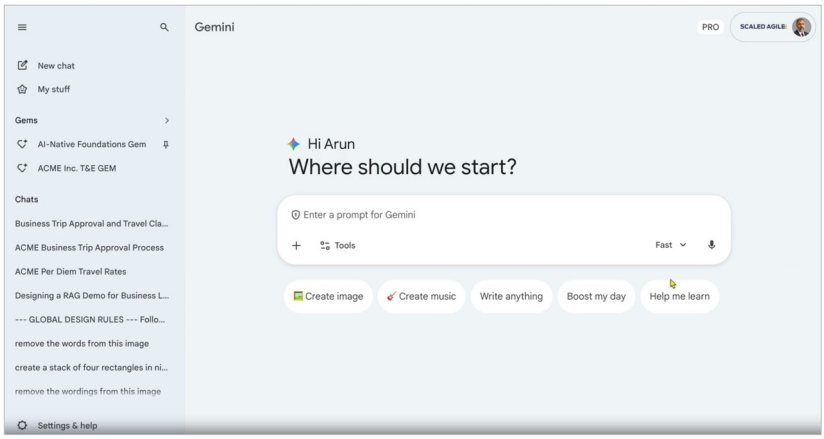

- LLM's predict next token, are probabilistic, and not sources of truth
- Given these considerations, what kind of risks could emerge from using LLM's in your organization?
- Next, let's take a look at RAG in action…

11

Demo: LLM Alone vs RAG

5 min

Watch video

12

Quick Discussion – RAG

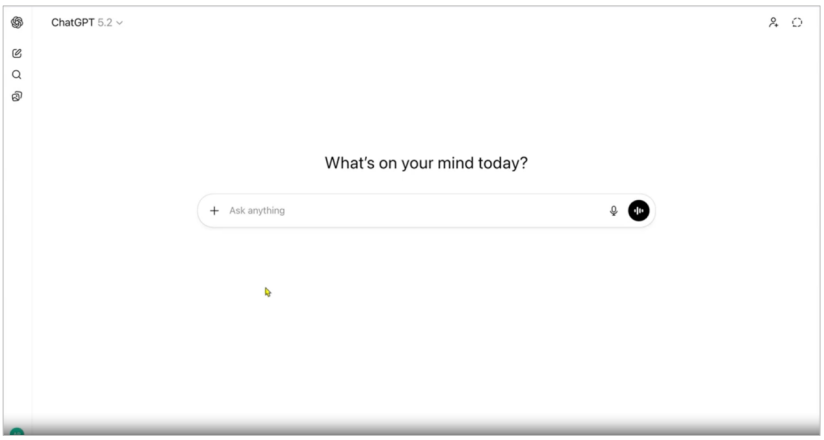

3 min

- RAG reduces hallucination risk but depends on data quality and retrieval quality
- Who is responsible for ensuring our internal 'source of truth' isn't full of outdated or conflicting data?
- Next, let's look at Agents…

Demo: Agents in Action

3 min

Watch video

Quick Discussion – AI Agents

3 min

- Agents move AI from answering questions to taking action
- Where in your business could an agent own a workflow end-to-end and where would you still require human oversight?
- Next, let's look at practical use cases for agents across different areas of the business…

15

AI Agent Examples

Function	AI Agent Workflow Example
HR	An AI agent screens incoming resumes, schedules interviews with qualified candidates, and prepares a summary briefing for the hiring manager
Sales	An AI agent monitors CRM activity, identifies deals at risk, gathers customer insights, and suggests actions for the sales rep
Finance	An AI agent reviews invoices, flags anomalies or policy violations, and routes approvals or questions to the appropriate manager
Operations	An AI agent monitors operational metrics, detects issues like delays or outages, and alerts the responsible team with recommended actions

16

Choose the Capability

3 min

Capability Sorting – Choose the minimum capability

LLM Prompt / RAG / Agent

Scenario 1

Prepare an executive briefing by combining internal reports, recent performance data, and market trends

Scenario 2

Review vendor invoices, match them to purchase orders, flag discrepancies, and route for approval

Scenario 3

Evaluate contract terms against company policy and highlight risks or deviations

Ever-evolving Landscape

5 min

Context Engineering

Designing the right data, instructions, memory, and constraints so probabilistic AI produces reliable outputs at scale.

A2A (Agent-to-Agent) Protocol

AI agents delegating tasks and collaborating directly with other agents across tools and workflows.

MCP (Model Context Protocol)

A standardized way for AI models to securely access enterprise data, APIs, and systems in real time.

Small Language/Local Models

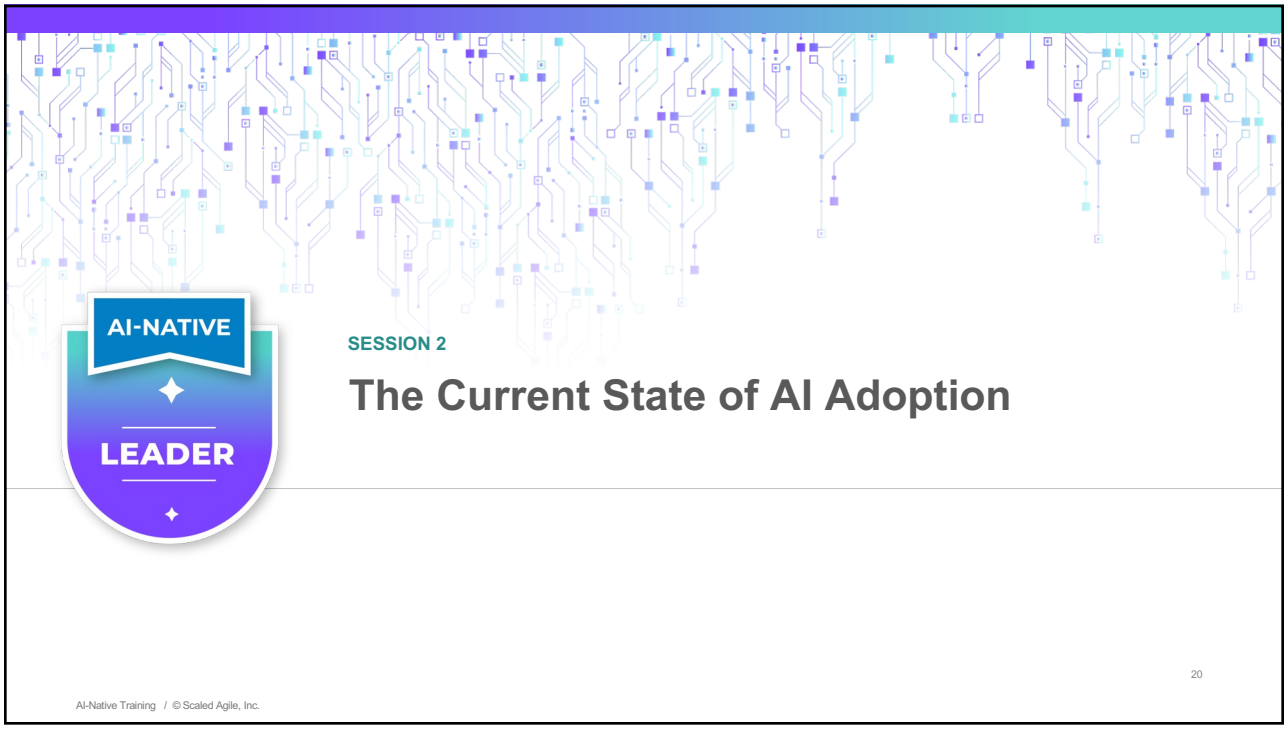

Small Language Models are improving very rapidly. More feasible to run AI models internally to control privacy, latency, cost, and governance.

What other emerging concepts do you want to discuss?

Key Takeaways

- Understand that AI is probabilistic, not deterministic
- Know where AI creates leverage and where it introduces risk
- Ask better questions about cost, data, governance, and architecture
- The best way to continue building **intuition** about AI is to **'do'** rather than just 'learn' theory

19

20

AI's Potential… and its Problems

The explosion of new capabilities fueled by Generative AI since 2022 has created unimaginable potential and trillions in untapped market value. However, **there is an enormous gap between potential and reality**, as AI has unique challenges that organizations must navigate to realize that value.

Understanding both the promise and the problems of AI is another critical component of a leader's AI intuition.

AI-Native Training / © Scaled Agile, Inc.

21

Why Most Organizations Fail

REALITY NOW

92% of companies are experimenting with AI

Only 25% are generating meaningful value from traditional AI

Less than 10% are meeting value expectations for GenAI

—RoAI Institute

THE AI CHASM

OPPORTUNITY

AI has the potential to deliver **$3.5 trillion** to **$5.8 trillion** in annual value across industries

The long-term opportunity in Generative AI is **$4.4 trillion** in added productivity growth potential from corporate use cases

—McKinsey & Company

22

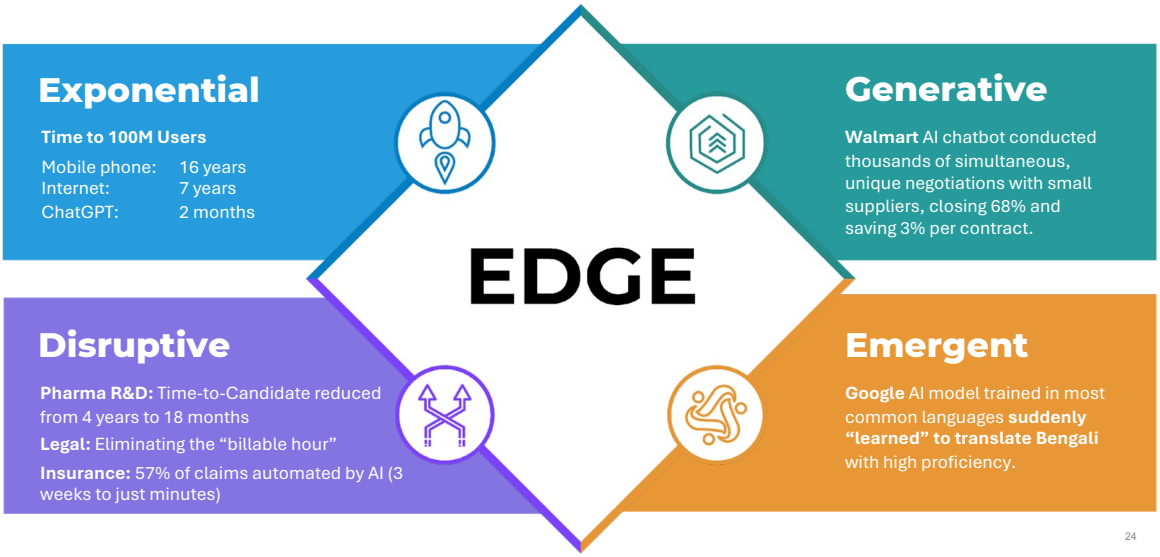

22

Why are organizations struggling to achieve AI's potential?

AI-Native Training / © Scaled Agile, Inc.

23

AI is Different

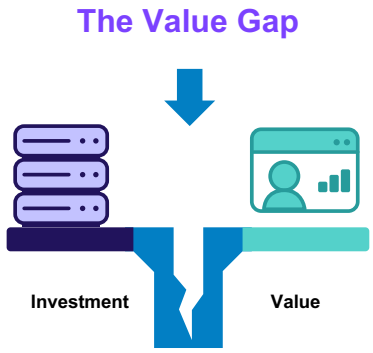

AI-Native Training / © Scaled Agile, Inc.

24

Misalignment to Clear Business Objectives

AI initiatives…

- Are frequently disconnected from organizational strategy
- Lack well-defined business goals or measurable success criteria
- Often begin as experiments ‘for AI’s sake’
- Never graduate to production because their value isn’t clearly understood or tracked.

CIO, 2025

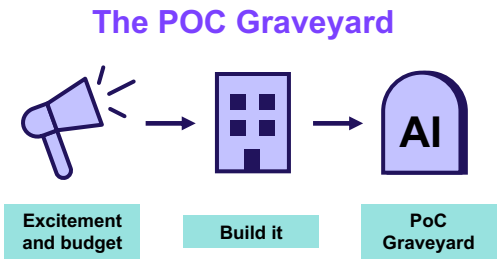

AI-Native Training / © Scaled Agile, Inc.

25

Pilot Paralysis & Abandonment Before Production

Several studies show a major “funnel drop-off” from pilot to production:

- In some surveys, nearly **half of all proof-of-concept AI projects are scrapped** before production scale-up.
- Unclear production pathways
- Lack of executive commitment to long-term deployment
- AI treated as an isolated technical experiment, not a core business capability

MIT NANDA, 2025

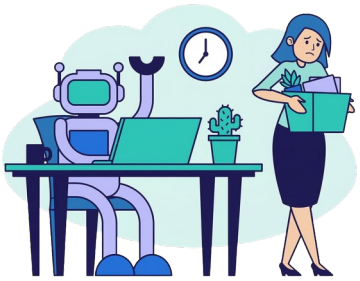

AI-Native Training / © Scaled Agile, Inc.

26

Skills & Cultural Barriers

- Limited internal AI fluency
- AI skills not translating into improvements to actual workflows and critical processes
- Constraints on access to tools, limitations on how AI can be used
- Siloed teams and poor collaboration between business units and technical teams
- Failure to cultivate an AI-ready but human- centric culture; using AI to reduce headcount

The Human Factor

CapTech, 2025

Data Quality, Readiness & Integration

- Data is incomplete, fragmented, or not “AI-ready”—even if it exists within the organization.
- AI systems trained on poor quality data can behave inconsistently or produce results that users distrust.
- Specific data-related issues seen in reports include:
  - Insufficient data quality/coverage to support scalable AI outcomes.
  - Fragmented data across systems making context and consistency hard to achieve.

The Data Dilemma

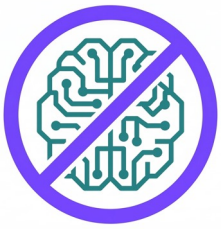

ZoomInfo, 2025

Lack of Trust, Transparency & Governance

Surveys show that companies cite a **lack of transparency, business risk concerns, and regulatory hesitation** as major factors keeping AI in pilot mode. Results in:

- Reluctance to put AI into production due to unknown risk profiles
- Human users not trusting outputs—even if technically valid
- Lack of financial and performance metrics for AI investments

The Wait and See Strategy

Camunda, 2026

29

29

What is your biggest AI challenge?

10 min

- Around the room are stations (or breakout rooms) for each of the factors presented as barriers to reaching AI's potential in an organization.
- Move from your table and stand by the station where you believe your organization faces the biggest challenge in AI adoption (or join the corresponding breakout).
- If your biggest challenge is not one of the five presented, create your own station with a sheet of flip chart paper (or join the 'Other' breakout).
- Share your experiences and observations with others at your station/in your group.
- Be prepared to share the most common or impactful examples.

30

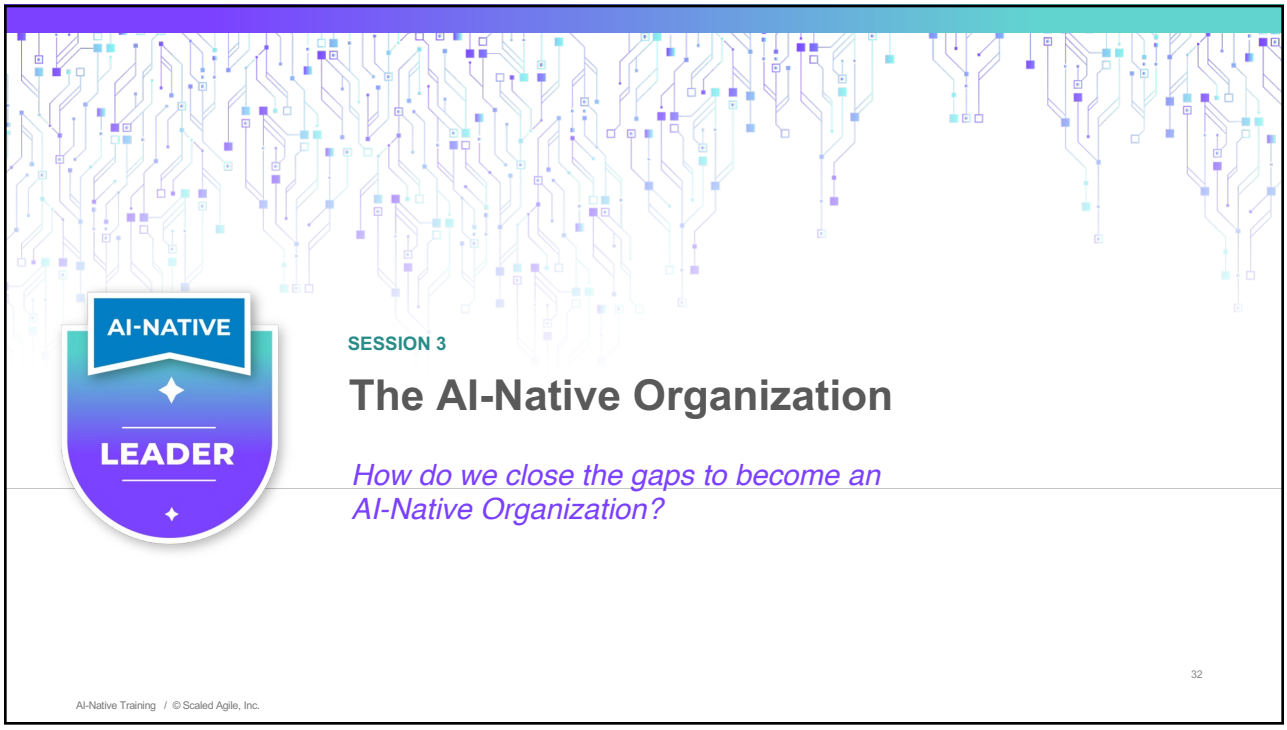

30

Questions Every Leader Must Ask

- **Bridging the Chasm:** How do we define measurable success for our AI experiments to ensure they move beyond "pilots for AI's sake" and cross into actual production value?
- **Identifying Anchors:** What specific organizational friction—such as fragmented data across systems or siloed business units—is most likely to trap our current initiatives in the "POC Graveyard"?
- **Defining the EDGE:** Are we treating AI as a disruptive force that can fundamentally reshape our industry (like reducing multi-week processes to minutes), or are we merely treating it as an IT upgrade?
- **Managing the Human Factor:** Beyond providing access to tools, what is our plan to address the cultural barriers and skill gaps that often prevent AI fluency from translating into improved workflows?
- **The Cost of Waiting:** If our current approach is a "Wait and See" strategy, what specific signals will we use to determine when to pivot before we fall behind the exponential growth seen in the market?

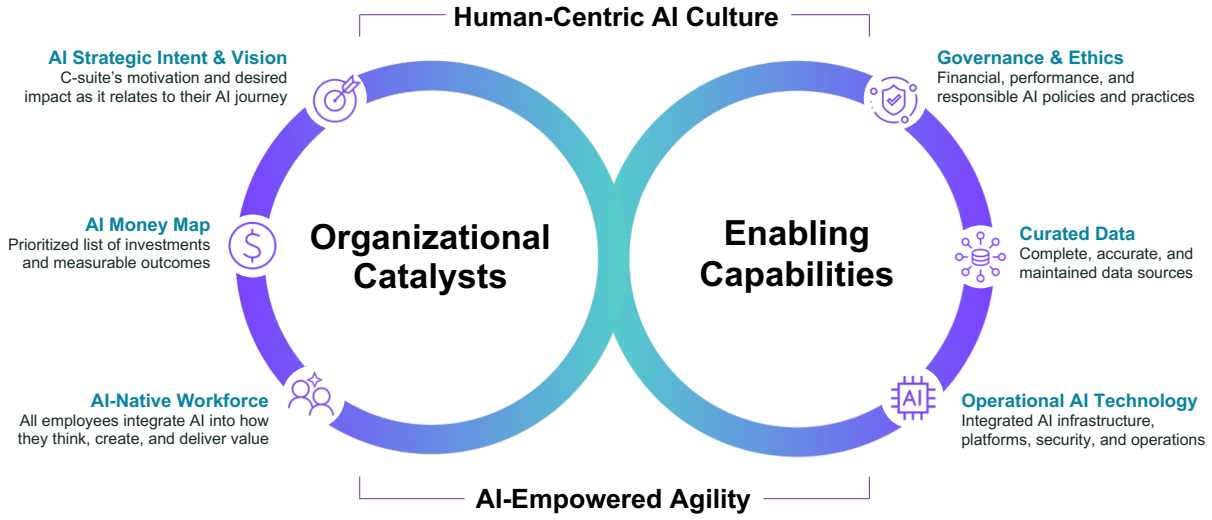

AI-Native Training / © Scaled Agile, Inc.

31

32

The AI-Native Organization

33

What is an AI-Native Organization?

An **AI-Native Organization** is built to reliably turn AI into measurable value by integrating **AI as a core operating capability**, aligning AI investments with strategy, and embedding the right guardrails, data/technology foundations, and workforce practices so AI moves from pilots to scaled impact.

AI only delivers results when strategy, governance, data, technology, and people are aligned—leaders must strengthen each area they own, or value stalls.

"In a world of limitless knowledge production, becoming AI-Native means shifting our organizations' focus and our professional passion from building outputs to delivering outcomes."

Dr. Mik Kersten
Author, Output to Outcomes

34

AI Success Stories: Morgan Stanley

The Challenge: Financial Advisors (FAs) struggled to synthesize 100,000+ proprietary research reports quickly enough to answer client questions in real-time.

The Solution:

- Built the ***AI @ Morgan Stanley Assistant,*** an AI chatbot grounded *strictly* in curated internal intellectual capital to ensure accuracy.
- Designed explicitly as a "co-pilot" to augment FAs, preserving the client relationship.

The Results

- **Revenue Growth:** Drove a 20% increase in gross sales by freeing advisor capacity.
- **Efficiency:** 45-minute research tasks reduced to seconds.
- **Trust:** Solved the "Black Box" problem by governing data *before* the AI touched it.

Leader Focus: *Curated Data + Human-Centric AI Culture + Governance & Ethics*

(Source: OpenAI, Morgan Stanley Press Release, Celent Award)

35

AI Success Stories: IKEA

The Challenge: Rising support call volumes threatened to overwhelm the business. IKEA needed to automate without laying off thousands of employees or losing their human touch.

The Solution:

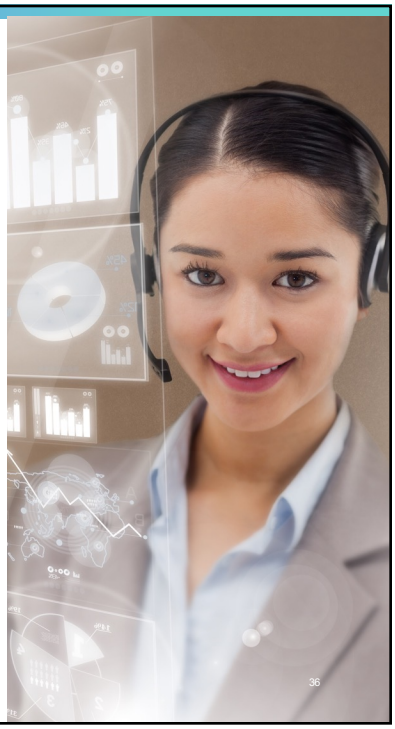

- Deployed the "**Billie**" bot for rote tasks, but focused strategy on **upskilling** 8,500 call center agents into "Interior Design Advisors."
- Moved humans from a Cost Center (Support) to a Profit Center (Design Services).

The Results:

- **47% Automation:** AI handles nearly half of all customer queries.
- **No Layoffs:** 8,500 staff successfully retrained for higher-value roles.
- **$1.4B Revenue:** This human advisory channel generates over $1.4B annually.

Leader Focus : *Human-Centric AI Culture + AI-Native Workforce*

(Source: Reuters, World Economic Forum, Business Insider)

36

AI Success Stories: Siemens

The Challenge: Manufacturing facilities face severe shortages of skilled automation engineers, creating massive bottlenecks when programming and debugging complex robotic hardware systems.

The Solution:

- Launched **Siemens Industrial Copilot**, a GenAI assistant for B2B clients that connects directly to industrial control hardware.
- Uses GenAI to rapidly generate, optimize, and debug automation code for factory machinery.

The Results

- **Engineering Velocity:** Reduced complex simulation and coding tasks from weeks to minutes.
- **Downtime Reduction:** Maintenance staff use natural language to instantly retrieve repair instructions, slashing factory downtime.
- **B2B Adoption:** Rapidly adopted by major global automotive suppliers to accelerate their own manufacturing speed.

Leader Focus: *AI Money Map + Operational AI Technology*

(Sources: Microsoft, Research Nester)

37

Success Story Takeaways

5 min

- What key observations and insights will you take away from these success stories?
- What other success stories have you seen or heard about?

38

AI-Native Organization Heatmap

10 min

Element	Average Rating	Degree of Variance
AI Strategic Intent & Vision	3.0	.5
AI Money Map	3.0	.5
AI-Native Workforce	3.0	.5
Governance & Ethics	3.0	.5
Curated Data	3.0	.5
Operational AI Technology	3.0	.5
Human-Centric AI Culture	3.0	.5
AI-Empowered Agility	3.0	.5

39

39

How to use your heatmap results

2 min

- Think about what surprised you and why
- Make note of any element of the model where there was:
  - Strong agreement on a weak element
  - Significant disagreement on an element
- Use those observations to sharpen your focus in the lessons that go deeper into each element of the model

40

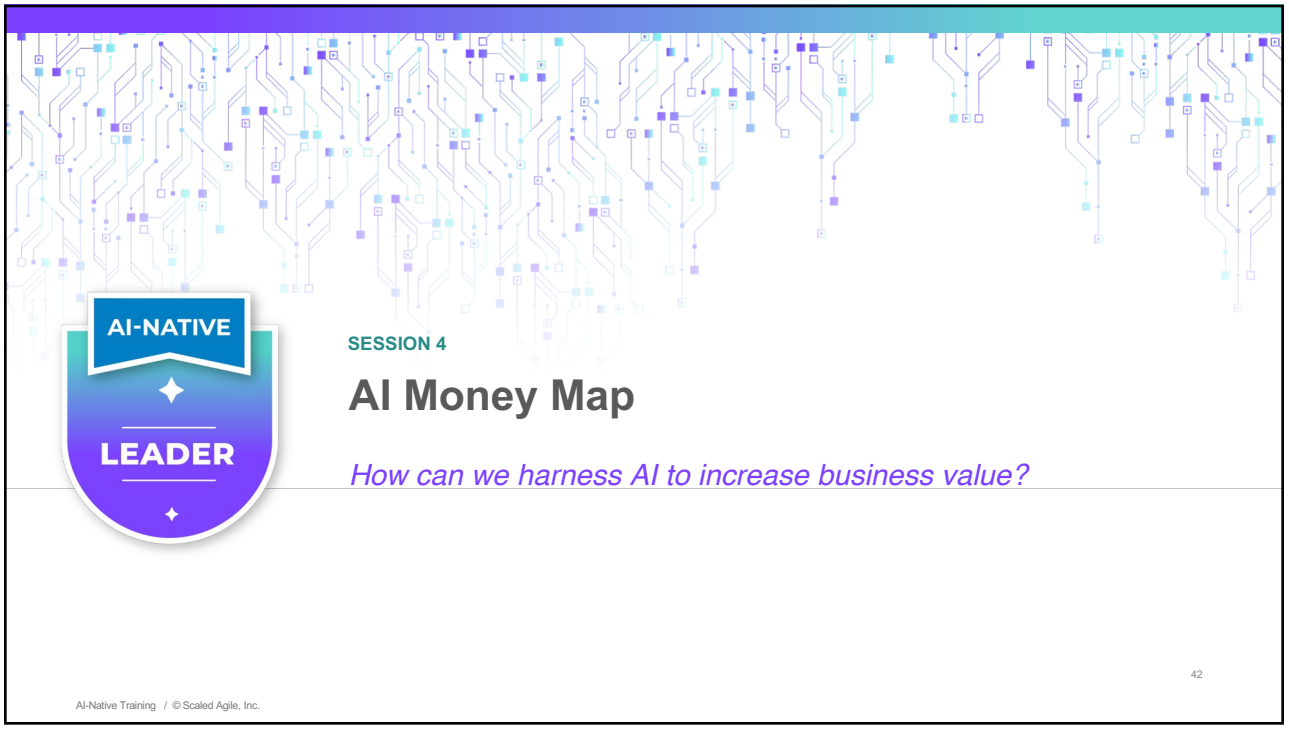

40

Key Takeaways for Leaders

- **A Core Operating Capability:** AI-Native is not a series of experiments; it is building the organization to reliably turn AI into measurable value as a core operating capability.
- **Alignment or Stall:** AI only delivers results when strategy, governance, data, technology, and people are aligned—leaders must strengthen each area they own, or organizational value stalls.
- **The Blueprint for Scale:** Becoming AI-Native requires moving from disconnected "pilots" to a governed operating asset that is monitored, logged, and secure for the whole enterprise.
- **Strategic Outcome Focus:** Success requires shifting from funding technological novelty to funding business outcomes, such as transforming traditional cost centers into new channels for revenue and value creation.

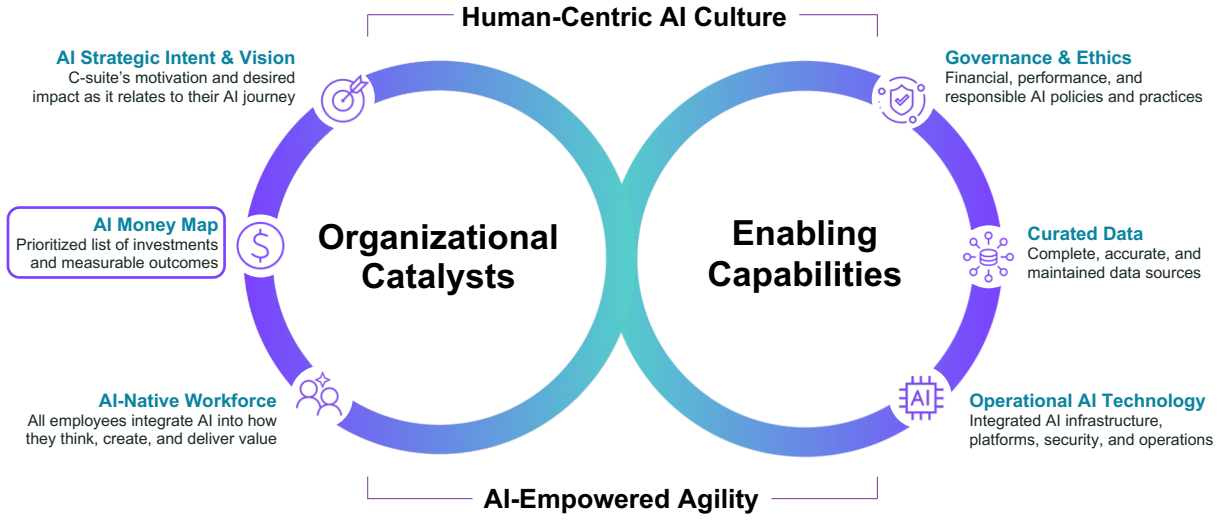

AI-Native Training / © Scaled Agile, Inc.

41

42

How can we harness AI to increase business value?

43

43

What is an AI Money Map?

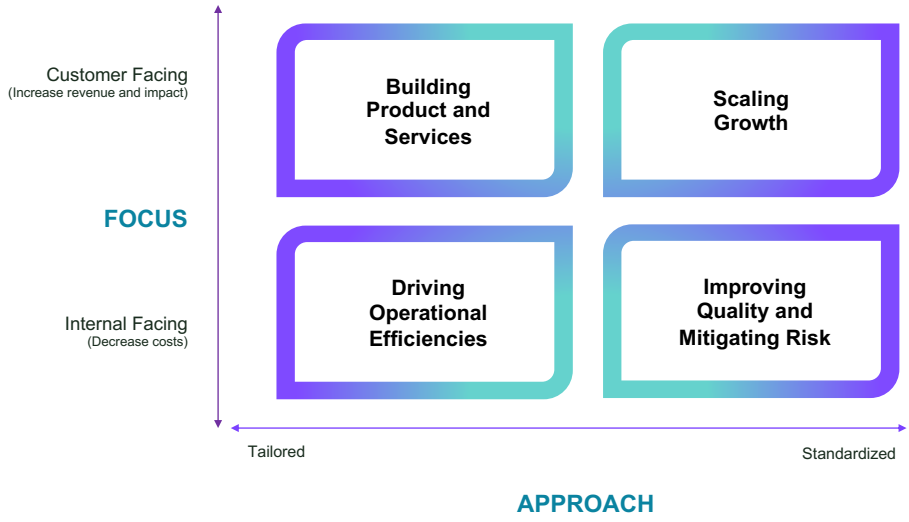

The **AI Money Map** is a prioritized list of investments and measurable outcomes. It is a value-led view of the AI initiative roadmap that connects every dollar of investment to a specific return, helping leaders see past the hype and focus on measurable ROI.

The AI Money Map equips leaders to turn AI ambition into a manageable portfolio, aligning investment, ownership, and expected return before execution begins.

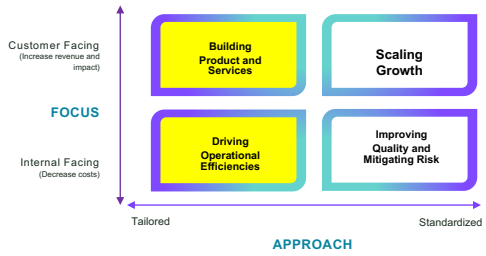

44

The Value Creation Matrix

45

Five AI Value Patterns

1. Knowledge and Decision Support

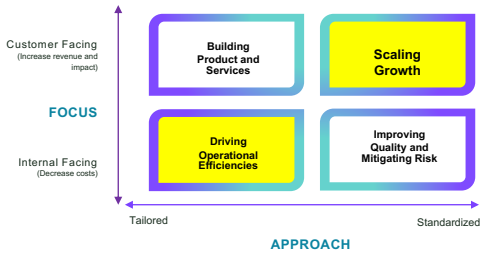

- AI that synthesizes information, surfaces insights, and augments human judgment—answering questions, summarizing data, recommending actions
- Example:
  - A global investment firm built an internal AI assistant trained on its massive library of proprietary investment research (over 100,000 documents).
  - **The Value:** Instead of financial advisors spending hours searching through documents to find answers for clients, the AI instantly synthesizes the relevant internal research. This allows every advisor to leverage the firm's collective intelligence immediately, scaling their expertise and ensuring that advice is compliant with the firm's **unique and differentiating** research.

46

Five AI Value Patterns

2. Customer Interaction

- AI that engages directly with customers—chatbots, personalized recommendations, voice assistants, service automation

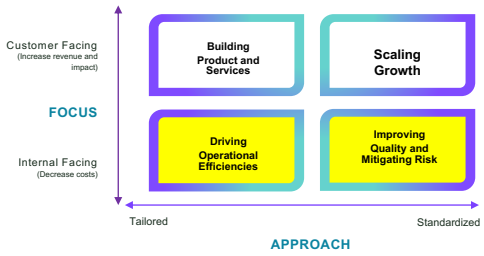

- Example:
  - An online payments company launched an AI assistant to handle customer service inquiries directly within their app.
  - **The Value:** In its first month, the AI handled 2.3 million conversations (two-thirds of their total volume). It performed the equivalent work of 700 full-time agents, was available 24/7 in 35 languages, and achieved customer satisfaction scores on par with human agents. This is a textbook example of Scaling Growth—expanding service capacity massively without linear cost growth.

AI-Native Training / © Scaled Agile, Inc.

Five AI Value Patterns

3. Workflow Automation

- AI that executes repetitive tasks, routes work, processes documents, and handles high-volume operations without human intervention

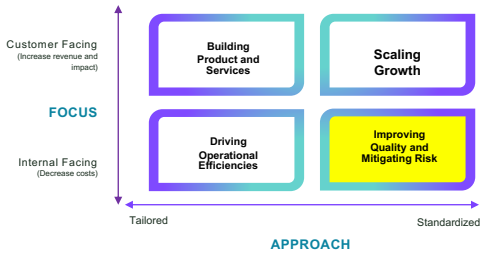

- Example:
  - A government law enforcement agency implemented an AI-powered call routing system in its Counterterrorism Network Operations Center (Public Access Line). Previously, agents had to manually triage every incoming tip.
  - **The Value:** The AI now automatically transcribes, analyzes, and routes non-emergency calls to the correct department without human intervention. This automation increased agent availability by roughly 30%, freeing highly skilled agents to focus on high-value investigations rather than administrative routing.

AI-Native Training / © Scaled Agile, Inc.

Five AI Value Patterns

4. Risk and Control

- AI that detects anomalies, monitors compliance, identifies fraud, and enforces governance—the "watchdog" pattern

- Example:
  - A global credit card company deployed a proprietary generative AI model to scan transaction data in real-time.
  - **The Value:** By analyzing the complex relationships between billions of transactions (rather than just linear rules), the AI can predict whether a transaction is genuine or fraudulent in under 50 milliseconds. This helps banks detect fraud patterns that traditional systems miss, directly mitigating financial risk and protecting the integrity of the payment network.

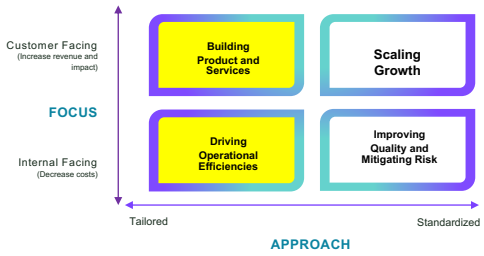

AI-Native Training / © Scaled Agile, Inc.

49

Five AI Value Patterns

5. Expert Productivity

- AI that amplifies the output of skilled workers—code generation for developers, research acceleration for analysts, drafting for legal/finance

- Example:
  - Software developers across major enterprises use GitHub Copilot as an "AI pair programmer" that suggests code, writes tests, and debugs errors in real-time.
  - **The Value:** In controlled studies, developers using tools like Copilot completed tasks 55% faster than those without it. This not only saves time, but it also accelerates the speed at which new products can be brought to market *(Building Products)* and reduces the cost of maintaining internal software *(Operational Efficiency).*

AI-Native Training / © Scaled Agile, Inc.

50

There are many more AI value patterns

Synthetic Data Generation

Use GenAI to create massive, privacy-compliant test datasets. This accelerates R&D cycles by months and avoids the "Data Chasm" bottleneck.

Automated Compliance & "Watchdog"

Deploy real-time scanners for transaction fraud or regulatory drift. Proven to detect patterns traditional rule-based systems miss in under 50ms.

Automated Quality & Compliance

Deploy AI-driven vision and scanning systems to detect defects or regulatory drift in real-time. Reduces manufacturing production errors up to 35% and improve predictive maintenance accuracy by over 40%

Dynamic Demand & Supply Chain Prediction

Move beyond linear forecasting by analyzing thousands of variables—including geopolitical shifts and weather patterns—to optimize inventory in real-time. Prevent billions in annual costs from stockouts and overstocking.

Hyper-Personalization at Scale

Generate tailored marketing content or service responses for millions of customers simultaneously without increasing linear headcount costs.

Real-Time Strategic Synthesis

Automate the continuous analysis of multi-tier supplier data, market trends, and risk factors. Enables "what-if" scenario modeling in seconds to navigate geopolitical tensions or financial instability.

Dynamic Value-Based Pricing

Transition from static pricing to real-time adjustments based on demand, competitor activity, and perceived product value. Realize between 4% to 8% in immediate revenue growth by aligning price to customer willingness-to-pay before implementation.

Skills-Based Talent Acquisition

Replace traditional pedigree-based screening with AI-powered capability assessments. Organizations can evaluate coding, design, or analytical skills directly, eliminating college degree requirements for 50% of digital roles while improving hiring diversity and performance prediction.

51

And many more!

51

AI Value Creation in Your Organization

10 min

- Brainstorm ideas for how AI can create value in your organization. Capture your top 3 to 5 potential AI initiatives.
- Identify which quadrant of the Value Creation Matrix applies to each initiative you identify.
- Spend five minutes on individual brainstorming, then five minutes sharing ideas with each other – you may be inspired to add to your list!
- Each table/breakout group will share the top 1 or 2 ideas from your discussion with the entire cohort as a readout.

52

52

Categorizing Opportunities by Impact and Feasibility

- **Impact** – the magnitude of:
  - Potential value creation
  - Strategic alignment
  - Cost savings / revenue
  - Time-to-value
- **Feasibility** – the current state of:
  - Data readiness
  - Platform availability
  - Operational processes
  - Skills availability
  - Governance maturity
  - Risk profile

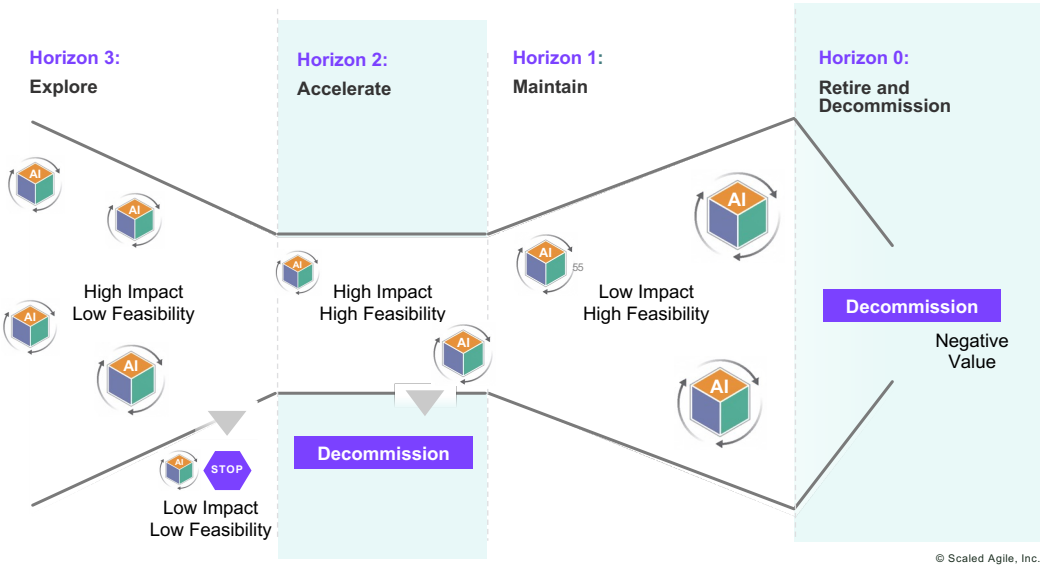

AI-Native Training / © Scaled Agile, Inc.

Impact + Feasibility for Determining Investment Approach

Impact + Feasibility	Investment Approach	Action
High Impact / Low Feasibility	EXPLORE	Structured pilots. 6 -12 month window to accelerate or stop.
Low Impact / Low Feasibility	STOP	Explicitly deprioritize. Free resources.
High Impact / High Feasibility	ACCELERATE	Fund next steps. Assign owners. Define 90-day milestones.
Low Impact / High Feasibility	MAINTAIN	Keep running. Think before expanding.
Negative Value	DECOMISSION	Build and fund a plan to decommission ASAP and reallocate resources.

AI-Native Training / © Scaled Agile, Inc.

Visualizing Your AI Investments

55

Categorize Your AI Opportunities

10 min

- Return to the initiatives you identified from the previous activity.
- For each idea listed, rate Impact and Feasibility as High / Medium / Low. (Consider the scores from your heatmap results for Feasibility)
- Given the Impact and Feasibility assessment, indicate your initial thoughts on where each initiative would be placed on your investment visualization.

EXPLORE | STOP | ACCELERATE | MAINTAIN | DECOMMISSION

- For the EXPLORE and ACCELERATE categories, use your assessment scores to prioritize initiatives within their respective categories.
- You will use your top ACCELERATE initiatives as the context for the remainder of the day.

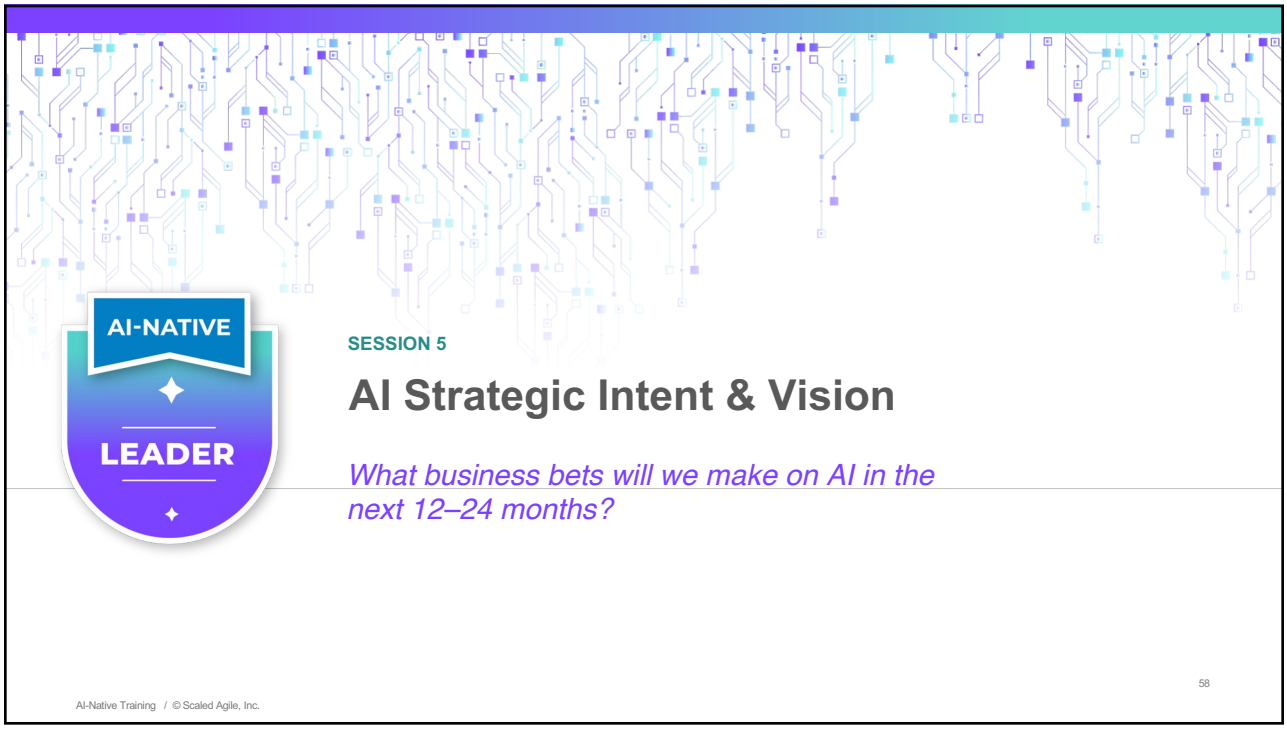

56

Key Takeaways for Leaders

- **Moving Beyond the Hype:** The AI Money Map is a leadership tool designed to bypass technical noise and focus exclusively on connecting every dollar of investment to a specific, measurable business return.
- **Strategic Allocation of Effort:** The Value Creation Matrix provides the lens to balance our portfolio between optimizing today's internal efficiencies (standardized approaches) and building tomorrow's differentiated customer products (tailored approaches).
- **The Feasibility Reality Check:** Strategic impact is only achievable when filtered through the reality of our current data readiness, platform availability, and workforce skills.
- **Active Investment Steering:** Success requires the discipline to determine which initiatives should be accelerated and which must be explicitly stopped or decommissioned to reallocate resources.
- **Defining the Accelerate Horizon:** By identifying high-impact and high-feasibility opportunities, leaders can move from "random acts of AI" to a prioritized AI roadmap that delivers immediate, tangible value to the organization.

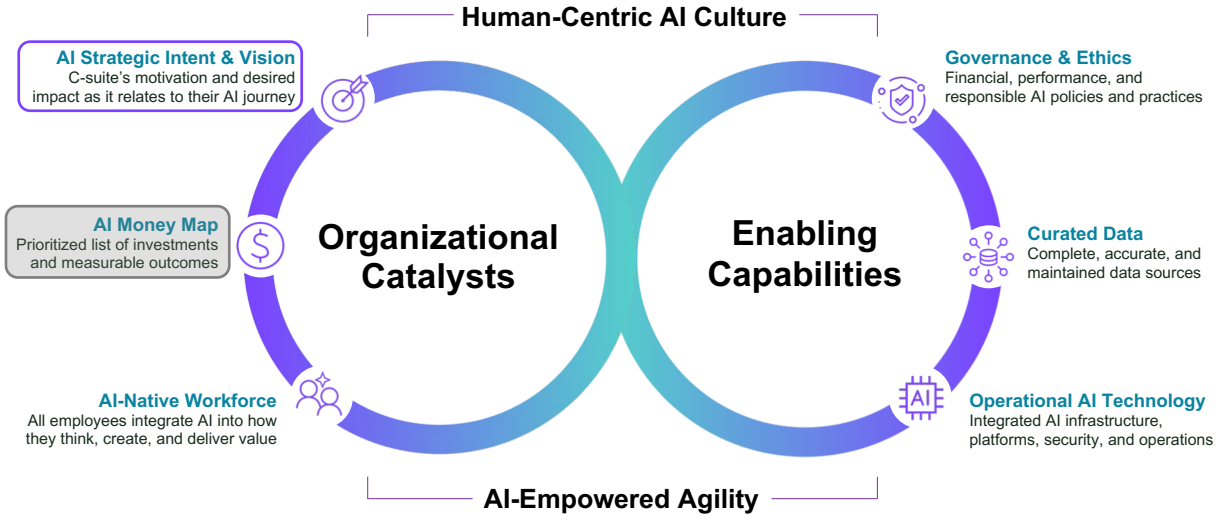

AI-Native Training / © Scaled Agile, Inc.

57

58

What business bets will we make on AI in the next 12–24 months?

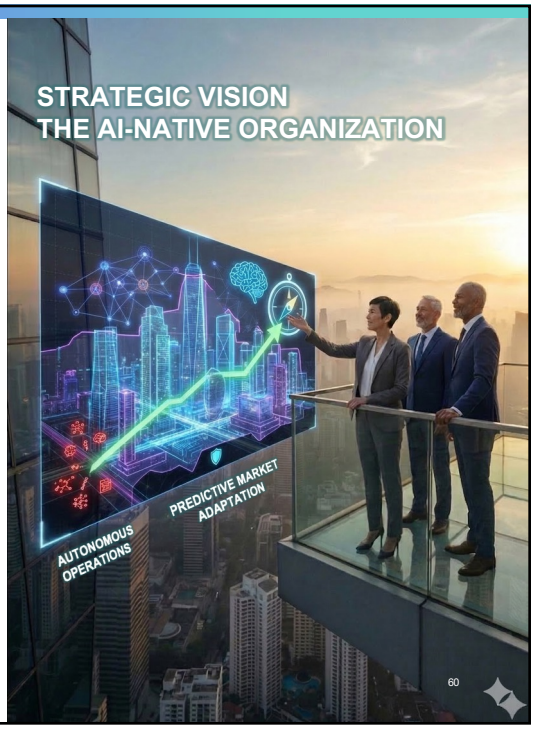

AI-Native Training / © Scaled Agile, Inc.

59

Why AI and Where are We Going?

AI Strategic Intent & Vision defines the specific business outcomes we intend to achieve with AI, and the role AI will play in our competitive strategy. They clarify where we will lead, where we will defend, and where we will not invest.

Without a clear strategic intent, AI efforts fragment into disconnected experiments. Leaders must define the destination so the organization can align investment, talent, and risk toward a common ambition.

AI-Native Training / © Scaled Agile, Inc.

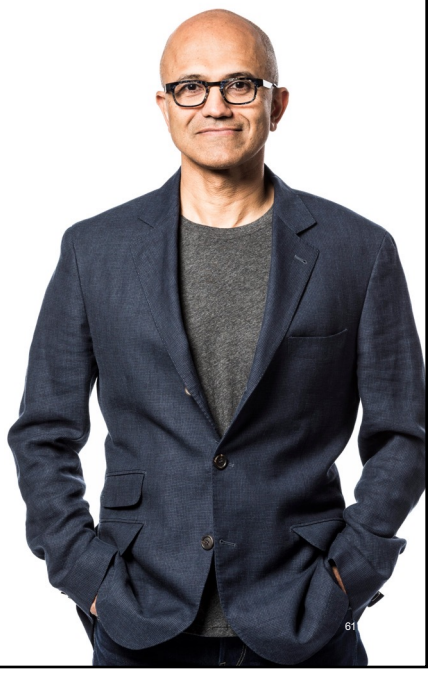

60

Envisioning Your AI-Native Future

What is your compelling ‘why’ for becoming an AI-Native Organization?

*"We will evolve from models to systems... The goal is not just to use the technology, but to deploy AI for **real-world impact that changes the outcomes of people, organizations, and industries."***

— Satya Nadella, CEO of Microsoft

61

Establishing Your AI Strategic Intent

Strategic Intent is executive leadership’s clear answer to “What is our purpose for adopting AI?” It anchors every AI investment to a specific business outcome.

- **The Shift:** We are moving from funding technology ("Let's build a GenAI tool") to funding outcomes ("Let's reduce customer churn by 10% using predictive retention").
- **Why It Matters:** Without clear intent, teams optimize for technical novelty rather than business value. Intent gives teams the "permission" to stop low-value experiments.

62

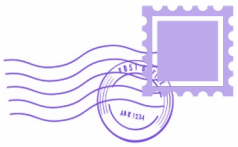

AI Strategic Intent & Vision - Postcard from the Future

10 min

Dear Acme Bank,

Thank you for creating the Smart Budget feature in your account website and app. We've been able to use it to find our unhealthy spending patterns and how to correct them. After just three months of using this feature, we no longer stress about money. Thank you!

—The Smiths

To: Acme Bank

- Create your own "postcard from the future" in your companion app
- What message would you hope to receive from customers because of what your organization was able to achieve by becoming AI-Native?
- What message would help motivate your workforce to be excited about their AI-Native future?
- How soon do we need to achieve this vision? What is our sense of urgency?

63

63

Essential Questions to Anchor AI Strategy

- **Operationalizing Urgency:** Does our current vision drive immediate action for the next 12–24 months, or is it too abstract to help us navigate the exponential change and disruptive forces currently transforming our industry?
- **The Differentiation Hypothesis:** Does our vision clearly articulate the specific areas where AI will provide us a unique competitive advantage?
- **Strategic Permission:** Is our strategic intent clear enough to give our teams the 'permission' they need to stop pursuing low-value 'random acts of AI' that don't align with our core business purpose?

64

64

AI-NATIVE LEADER

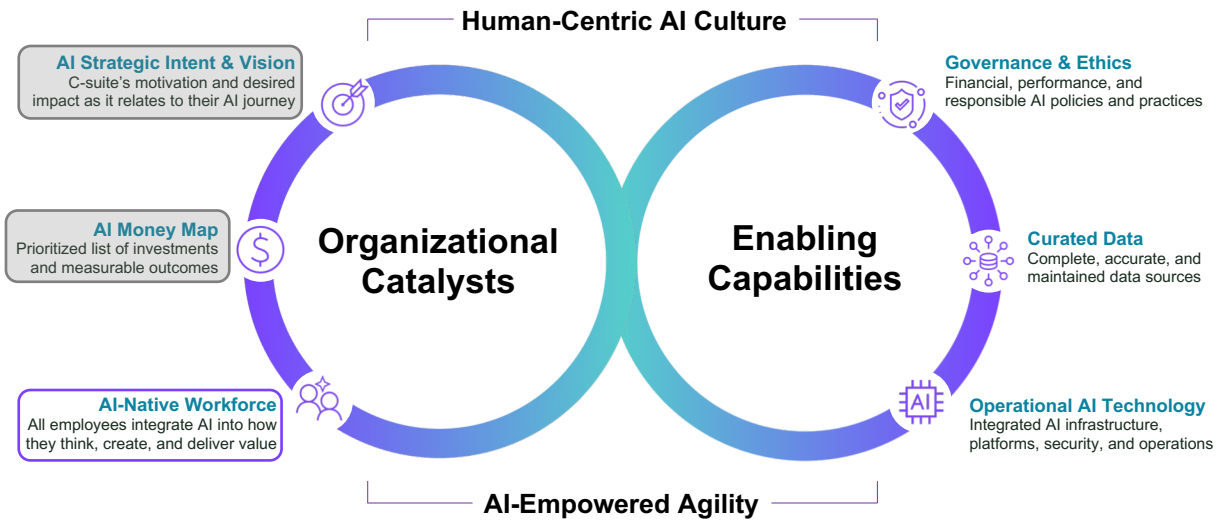

SESSION 6

AI-Native Workforce

How do we upskill our workforce…

65

How do we upskill our workforce…

66

AI Value Depends on People

An **AI-Native Workforce** integrates AI into every aspect of how work gets done. It occurs when every individual, from executives to front-line contributors, understands when and how to use AI safely to improve decisions, productivity, quality, and innovation as a normal part of daily operations.

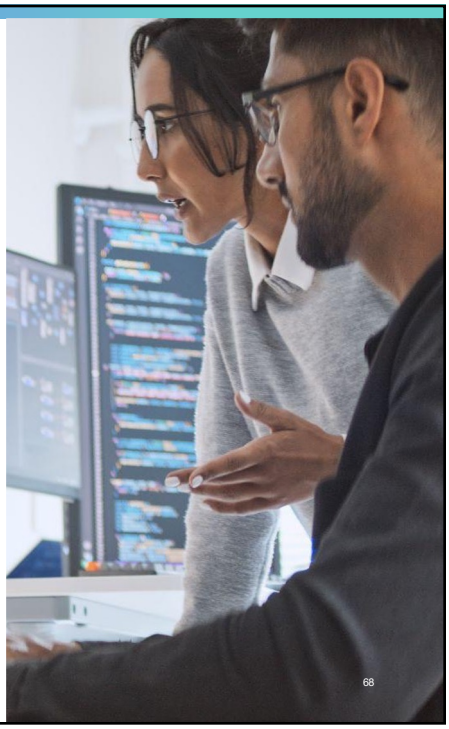

If your workforce does not change how it works, AI will not change your results. Leaders are accountable for equipping their teams with the tools, training, and time to reimagine their workflows to leverage the power of AI.

67

AI Upskilling is a Universal Business Imperative

- **33% of organizations** cited limited AI skills or expertise as their primary barrier to adopting AI solutions
- **Only half of organizations** say even 50% of their employees have well-developed AI skills
- **40% of the global workforce** will need to reskill in the next 3 years to adapt to AI-driven job changes
- **66% of leaders** said their employees lack the skills to use generative AI effectively.

68

Building the AI-Native Workforce

69

69

A Contrast of Approaches – AI Fluency

Legacy – Centralized Expertise

- Training is focused on the few
- Expertise is centralized
- Innovation is concentrated and limited

AI-Native – AI Fluency for All

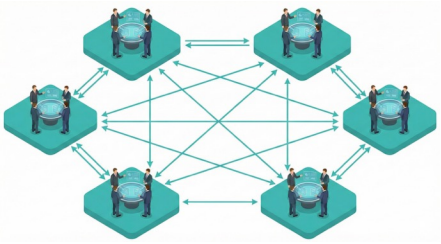

- Everyone is trained for AI fluency
- Expertise is elevated throughout the workforce
- Innovation is distributed to where the work is

70

70

A Contrast of Approaches – AI Change Agents

Legacy – Center of Excellence

- AI leadership is a bottleneck
- Strong AI expertise, limited knowledge of the work
- Can create an 'ivory tower' effect

AI-Native – Distributed Change Agents

- One or more assigned to each AI initiative
- Bridges AI capabilities & business context
- Supports adoption in their domain

A Contrast of Approaches – AI Leadership

Legacy – Delegated IT Initiative

- AI treated as a technology upgrade
- Focus on tools, features, and chasing hype
- Risk is managed reactively, leads to 'shadow AI'

AI-Native – AI Aligned to Strategy

- AI is treated as a core business lever
- Focus on capital allocation and P&L impact
- Proactive governance unlocks rapid innovation

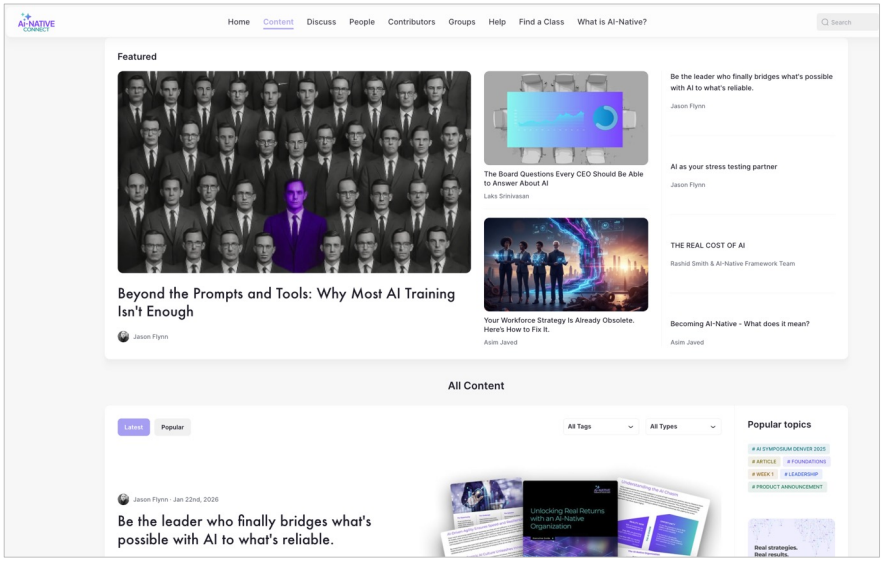

Your AI-Native Learning Journey

● Required ● Suggested	**AI-Native Individual skills** All Individuals across the organization	**AI-Native Leadership** Leaders at all levels across the organization	**AI-Native Change Agents** People tasked to drive AI adoption & initiatives	**Become an AI-Native Trainer** Trainers and consultants
AI-Native Readiness Assessment 1 Hour Online Coming May 2026	●	●	●	●
AI-Native Foundations Certification 2 days In-Person	●	●	●	●
AI-Native Leader Certification 1 day In-Person or Remote	●	●	●	●
AI-Native Change Agent Certification 3 days In-Person			●	●
2-Day Trainer Enablement Remote				●

All certifications are AI-Native credentials In-person unless noted

For Ongoing Learning and Support

AI-Native CONNECT is our platform for continuous learning at the speed of AI.

Go deeper into the concepts from your course.

Learn about new trends and issues in AI.

Connect with and learn from peers and experts from across the globe.

Workforce AI Assessment

10 min

Have a group discussion at your table/breakout group to assess your organization's AI readiness. Which part of the organization is most suited to take the next step in your journey to becoming AI-Native?

Consider the upskilling needs for:

- The Workforce
- Specialists
- Change Agents
- Leaders

AI-Native Training / © Scaled Agile, Inc.

Key Takeaways for Workforce Transformation

- AI alone will not change business results; leaders are directly responsible for providing the **time, training, tools, and guardrails** required for teams to fundamentally reimagine their daily workflows.
- Centralizing AI knowledge creates bottlenecks; an AI-Native organization **elevates AI fluency across the entire workforce** to ensure innovation happens where the work is actually done.
- Instead of treating AI as a technology upgrade delegated to the IT department, use it as a **core business lever** focused on strategic intent and measurable P&L impact.
- The ultimate leadership goal should be to transition teams from passive users of tools to active **creators of value** who can translate AI capabilities into real-world business results.

AI-Native Training / © Scaled Agile, Inc.

AI-NATIVE LEADER

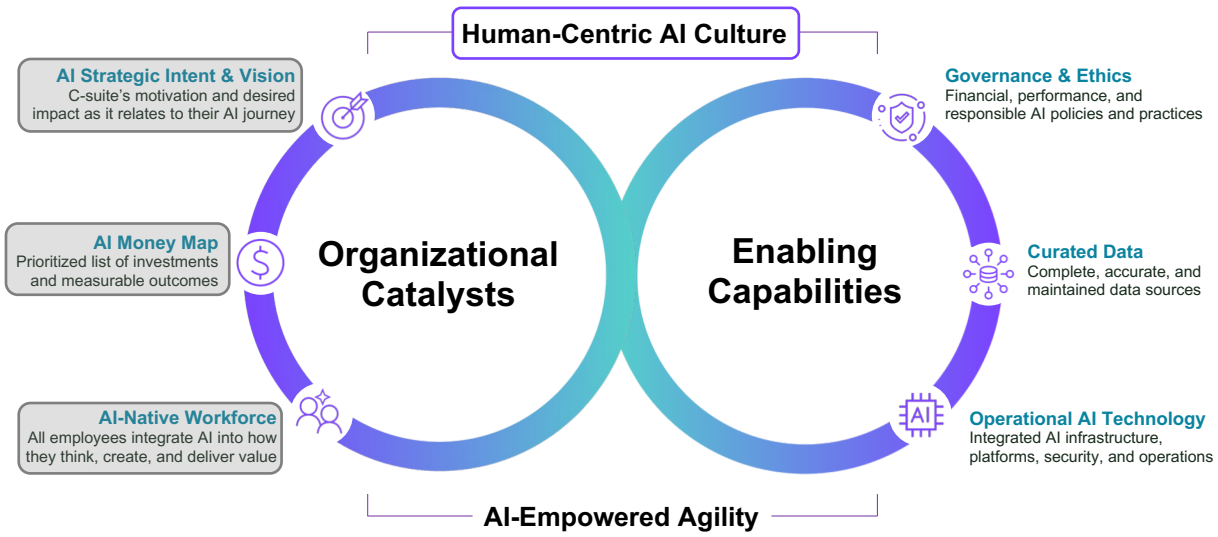

SESSION 7

Human-Centric AI Culture

How do we upskill our workforce…
… and build a Human-Centric AI Culture?

77

… and build a Human-Centric AI Culture?

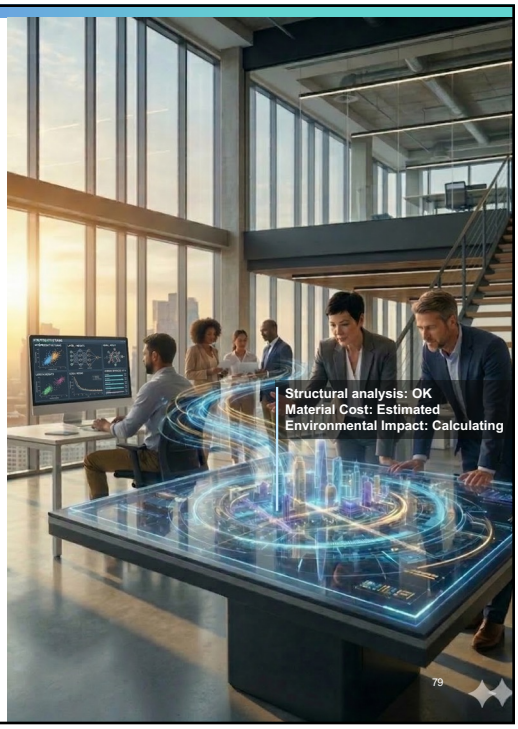

78

Shaping How AI Is Used

A **Human-Centric AI Culture** exists when AI is used to augment human judgment, creativity, and productivity, with clear expectations about responsible use, accountability, and performance standards.

AI will reshape how work is done, whether leaders guide it or not. Without intentional cultural direction, organizations drift toward fear, resistance, or reckless experimentation instead of disciplined performance gains.

79

Human-Centric AI Culture Means
AI frees humans to do what only humans can do.

AI handles tasks that don't require human judgment. That frees your people to do the work that they do best—interpretation, creativity, empathy, and strategic decisions.

The organization that gets this right outperforms the one treating AI as a headcount reduction tool.

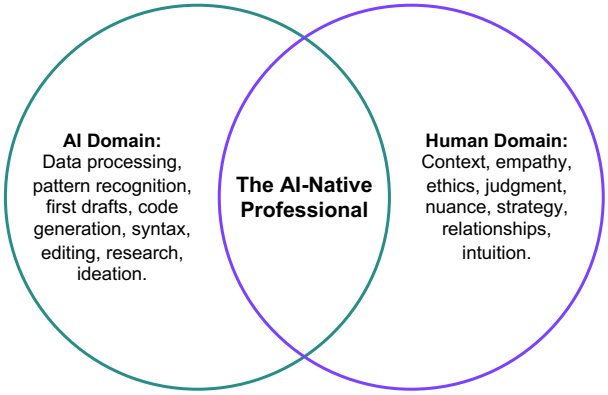

"The future of AI is not about replacing humans; it's about augmenting human capabilities."
—Sundar Pichai, CEO of Google

80

The Unique Value of Human Work

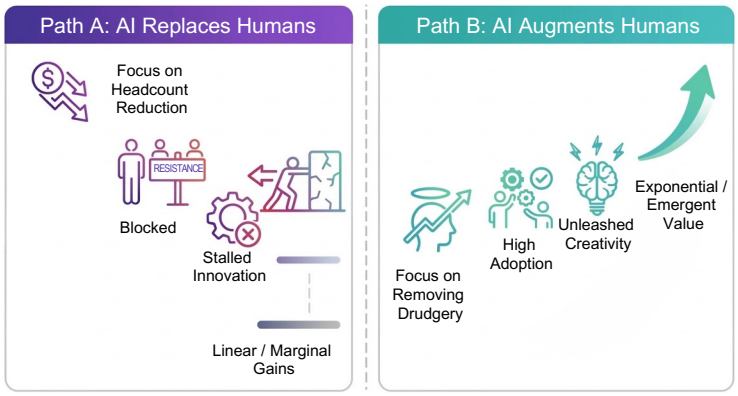

- As AI becomes commoditized, "Human Skills" become the premium asset.
- We need more judgment, not less. We need more empathy, not less.
- **Human-Centric AI Culture:** We celebrate the human ability to accelerate value creation by innovating with AI as a thought partner and intelligent assistant.

AI-Native Training / © Scaled Agile, Inc.

81

Avoiding the Replacement Trap

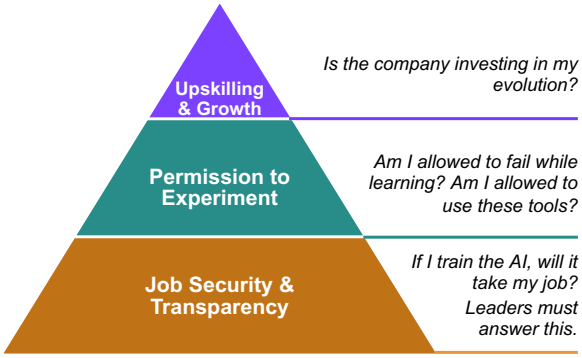

- **The Pattern:** Replacing humans with AI before AI's effectiveness for the targeted function is proven.
- **The Trap:** Gaps in AI's capabilities can lead to negative business impact. Where this has occurred, some or all of the humans had to be hired back. (Klarna example)
- **The Alternative:** Organizations use AI to offload cognitive load, allowing humans to solve previously unsolvable problems. (IKEA example)

AI-Native Training / © Scaled Agile, Inc.

82

Building Trust for AI Adoption

Hierarchy of Needs for AI Adoption

- **The Barrier:** Fear is the silent killer of AI ROI. If people fear replacement, they will hide data and stick to legacy processes.
- **The Solution:** Transparency. Be explicit about how efficiency gains will be reinvested (e.g., "We aren't cutting the marketing team; we are expecting the marketing team to double our output with the same headcount"). Builds psychological safety and trust.
- **The Requirement:** Upskilling is not a perk; it is a retention strategy.

AI-Native Training / © Scaled Agile, Inc.

83

Designing the AI Opportunity Narrative

10 min

- You have identified where AI can create value. How will you articulate the possibilities of AI to your teams so that they want to pursue them? As a table/ breakout group, rewrite the ‘fear narratives’ into ‘opportunity narratives’. Add additional narratives as needed.
- Write your ‘opportunity narrative’ statements as if you will be communicating these to your department at an upcoming All-Hands meeting.

The Fear Narrative	The AI Opportunity Narrative
"I don't have the technical skills to compete."	“We are launching the AI-Native Foundations course to ensure everyone has the fluency to lead in this new era."
"AI will automate our core tasks."	
(add your own additional ‘fears’)	
(add your own additional ‘fears’)	

AI-Native Training / © Scaled Agile, Inc.

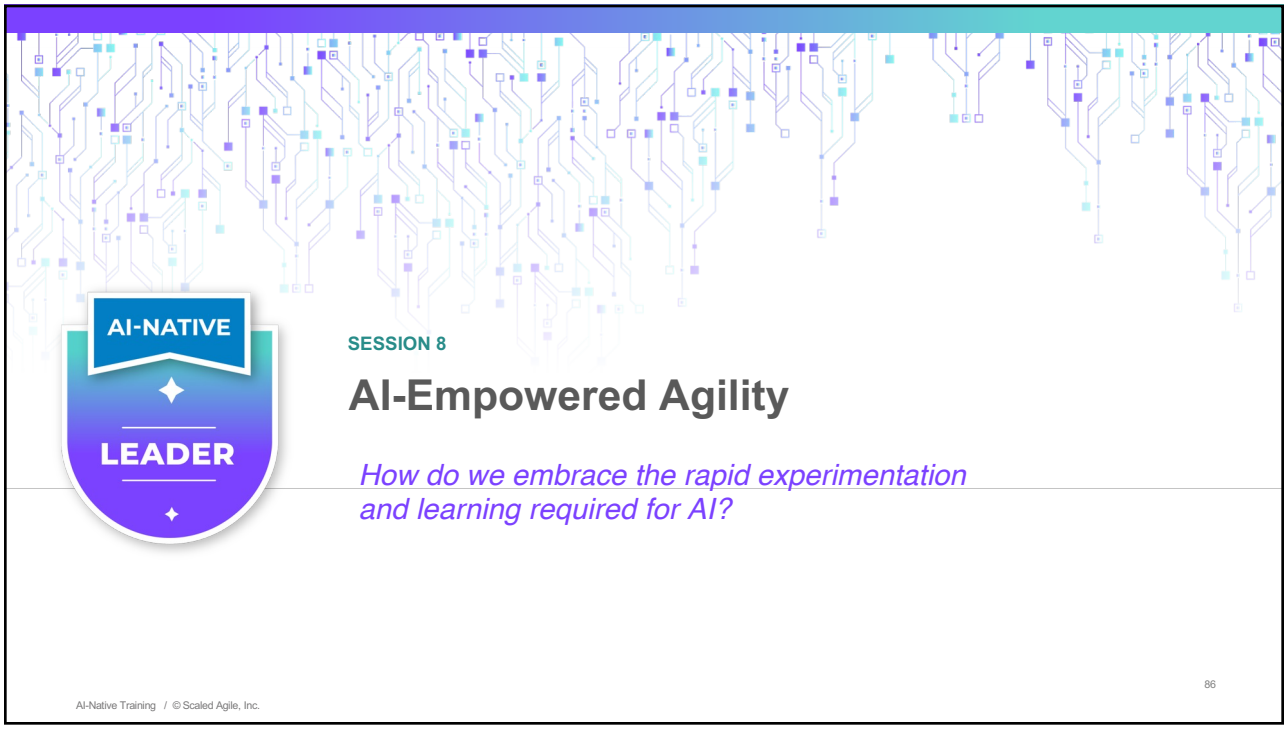

84

Questions to Guide a Human-Centric AI Culture

- Are we framing the value of AI solely by reducing people costs, or are we also considering redirecting our investment in talent to other value-creating opportunities?
- Have we built psychological safety by being explicit about how efficiency gains will be reinvested into growth?
- How are we rewarding the value of human-only capabilities, such as judgment, empathy, and intuition, that AI cannot replicate?
- Have we provided 'permission to experiment' where teams feel safe to fail while reimagining their workflows?

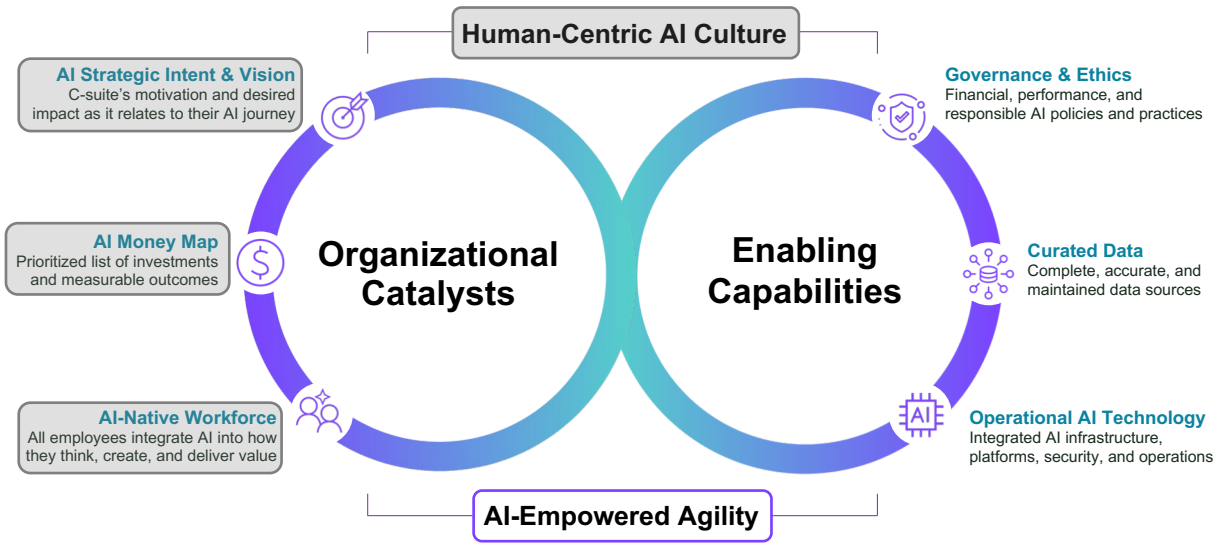

AI-Native Training / © Scaled Agile, Inc.

85

86

How do we embrace the rapid experimentation and learning required for AI?

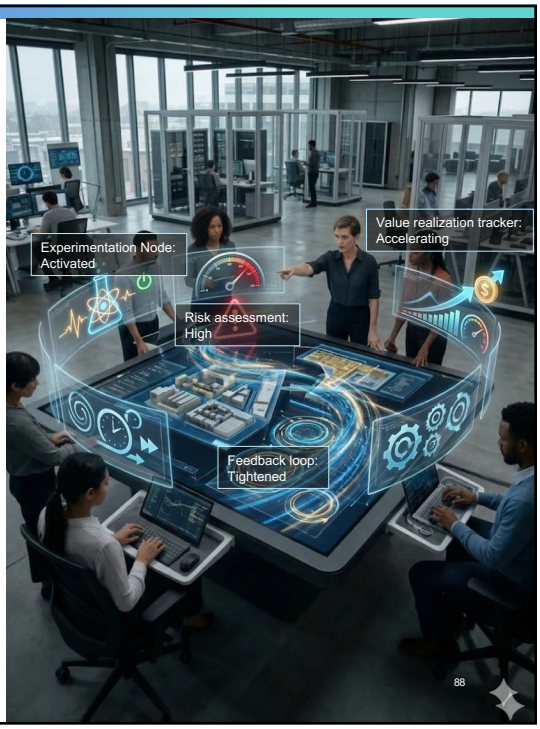

AI-Native Training / © Scaled Agile, Inc.

87

Agility at the Speed of AI

AI-Empowered Agility is the capability to rapidly and responsibly develop and deploy AI-driven solutions, while also leveraging AI to continuously enhance the speed, quality, and adaptability of Lean-Agile methods.

AI increases uncertainty and accelerates change, which means traditional planning cycles break down; leaders must reinforce shorter learning loops, tighter feedback, and clear accountability or AI initiatives will drift, overrun, or stall.

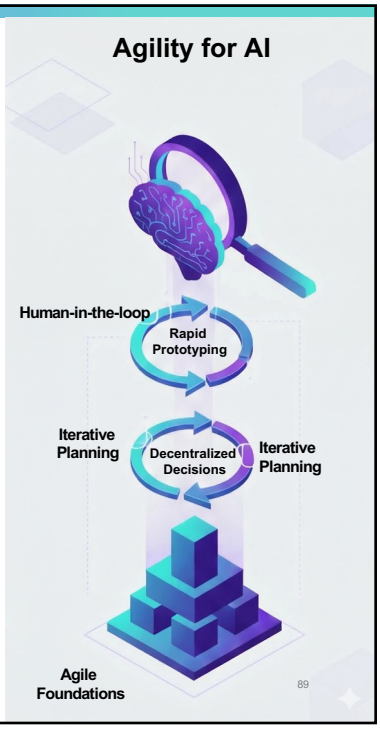

AI-Native Training / © Scaled Agile, Inc.

88

Practical Guidance - Agility for AI

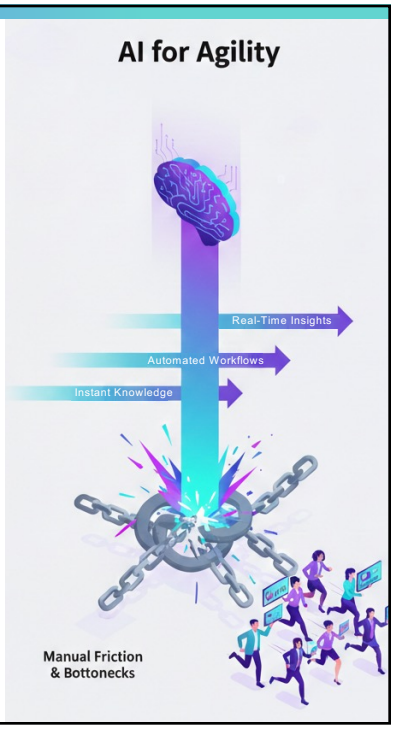

- **Fund small-scale, rapid prototypes** to validate business hypotheses before committing to large-scale AI investments.
- **Replace rigid annual planning** with iterative strategy cycles that allow the organization to sense and adapt as AI models and costs evolve.
- **Empower cross-functional teams** to make decentralized decisions, enabling faster pivots in response to new AI capabilities or market shifts.
- **Test AI use cases at a small scale with customers** to demonstrate actual business value quickly and at the lowest possible cost.
- **Establish "human-in-the-loop" protocols** to manage errors and unpredictability of AI, ensuring safety and accountability for critical decisions.

89

Practical Guidelines - AI for Agility

- **Implement secure, internal RAG systems** to provide instant knowledge access, replacing hours of manual searching with seconds of querying.
- **Utilize AI to continuously synthesize market signals** and customer feedback, enabling leaders to pivot strategy frequently rather than waiting for quarterly reviews.
- **Automate repetitive administrative tasks** and operational bottlenecks with AI to remove friction and accelerate organizational flow.
- **Embed AI assistants in product development** to shorten learning cycles and significantly increase the velocity of value delivery.
- **Use AI to analyze value flow** across the organization, automatically identifying and alerting leaders to impediments that are slowing down initiatives.

90

What will slow you down?

8 min

- In small groups, list 1–3 traditional planning, funding, or governance practices in your organization that act as "legacy anchors," slowing down AI initiatives (e.g., rigid annual budgeting or long procurement cycles).
- For each anchor, describe the specific friction it creates and why it prevents the organization from "moving fast and learning fast".

AI-Native Training / © Scaled Agile, Inc.

The New Agility Dividend

- **The Payout for Your Investment:** Your organization's long-term commitment to Lean-Agile foundations—cross-functional teams, fast cycles, and decentralized decisions—is no longer just a process improvement; it is now your essential prerequisite for AI survival.
- **The Incompatibility of Legacy:** Waterfall command-and-control is deterministic and fundamentally incompatible with the probabilistic nature of AI; applying legacy management expectations to AI will cause your initiatives to stall indefinitely.
- **Greater Agility is Required:** Lean-Agile patterns must evolve even further with AI; co-pilot technology for development will continue to evolve rapidly, autonomous agents will become teammates, and Build-Measure-Learn cycles will be shorter than ever before.
- **Your Role as the Impediment Remover:** As a leader, your 'so what' is identifying and dismantling the 'legacy anchors' like rigid annual budgeting and long procurement cycles that prevent your organization from operating at the speed of AI.

AI-Native Training / © Scaled Agile, Inc.

AI-NATIVE LEADER

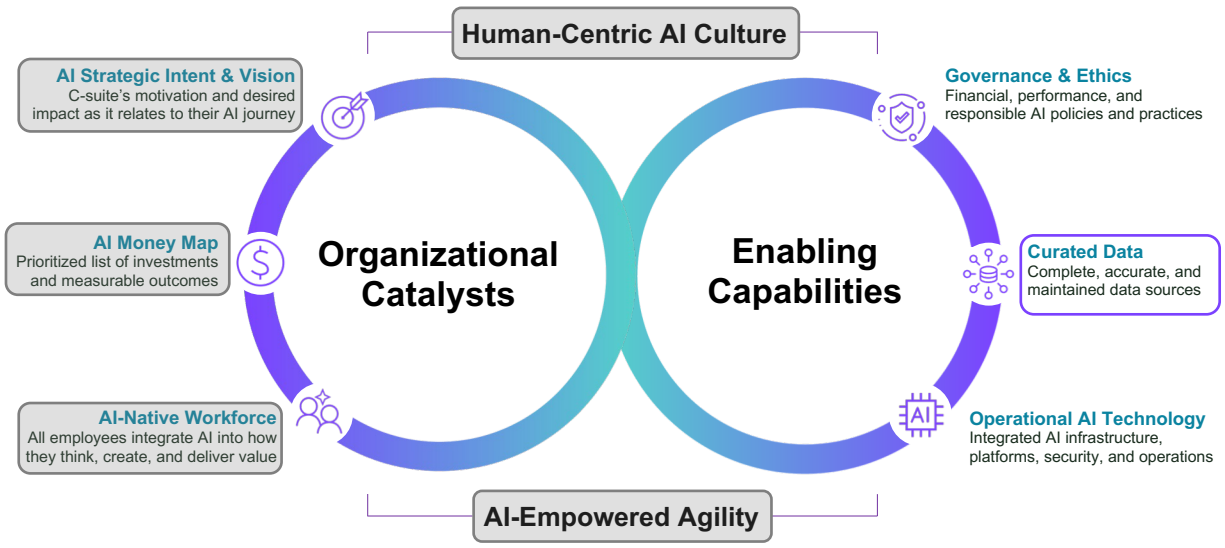

SESSION 9

Curated Data

What technology investments are needed for our AI strategy?

93

What technology investments are needed for our AI strategy?

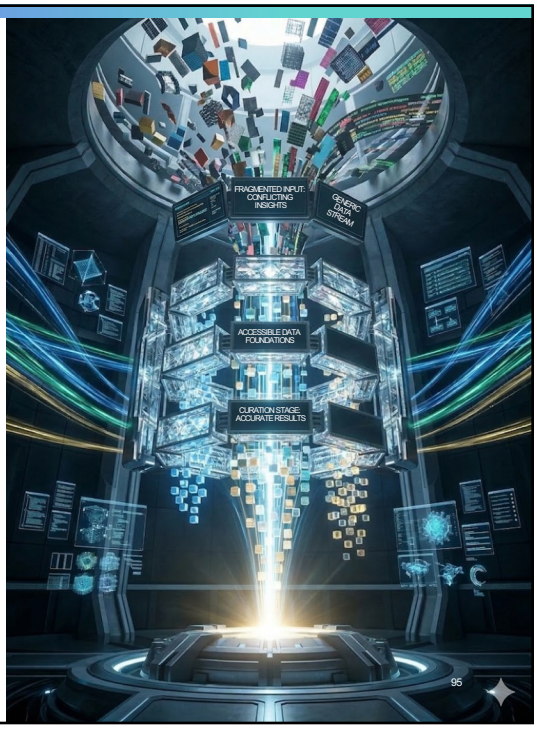

94

Data Unlocks AI Value

Curated Data is enterprise data intentionally prepared for AI use, delivering reliable, organization-specific insights rather than fragmented or conflicting results.

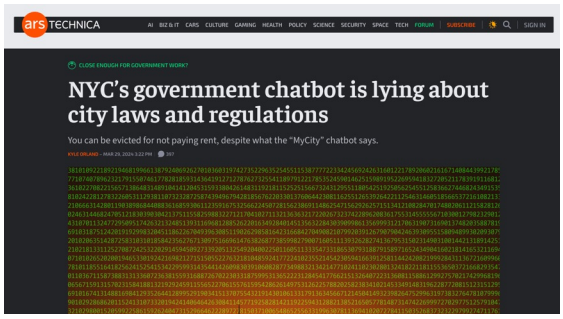

AI models are widely available, but differentiated performance comes from your data; without investing in accessible, consistent, and well-governed data foundations, AI initiatives will produce generic results, conflicting insights, or fail to scale.

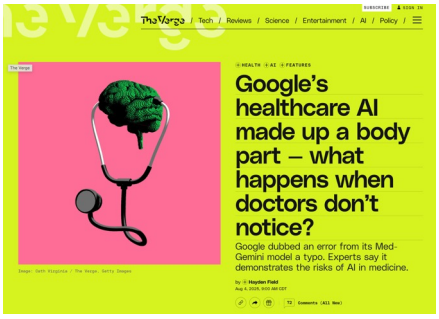

95

Consequences of Bad Data

- AI outcomes reflect the data that AI is allowed to use
- Bad data scales faster with AI than with humans

NYC Chatbot Article

Google Healthcare Article

AI Is Only As Good as the Data It Uses

Curated Data: The Fuel for AI Systems

- **Complete**: The AI can access all the knowledge needed to answer questions or perform tasks
- **Accurate**: Information is verified and trustworthy
- **Maintained and Securely Accessed**: Data must stay current, and the right people and systems must have the right access to it

97

Curated Data is a Leadership Responsibility

Curated data doesn't happen automatically. Leaders must ensure:

- **Ownership**: Every critical data domain has a clear business owner responsible for its quality and stewardship
- **Investment**: Resources are allocated to curate, maintain, and structure enterprise knowledge
- **Governance**: Policies define what information AI systems can access and how that access is controlled
- **Accountability**: Teams are responsible for keeping data complete, accurate, current, and securely accessible

98

Curated Data Exercise – Financial AI

10 min

Prompt: ” Our company wants to deploy an AI assistant that explains financial performance, for example: ‘Why did operating expenses increase last month?’ What internal data sources would the AI likely need to answer this reliably?”

1. Ask the AI the prompt
2. Review the data sources it suggests
3. For each source, decide
   - ✅ Allowed – safe and reliable for AI use
   - ⚠️ Conditional – needs controls, filtering, or governance
   - ❌ Not Allowed – too risky or unreliable

Data Questions Every Leader Should Ask

- What defines “truth” for this use case – and is it defensible?
- Who owns it, and how often is it updated?
- What data is explicitly out of bounds?
- Where could it be confidently wrong, and how would we know?
- Who is accountable if this causes harm?

AI-NATIVE LEADER

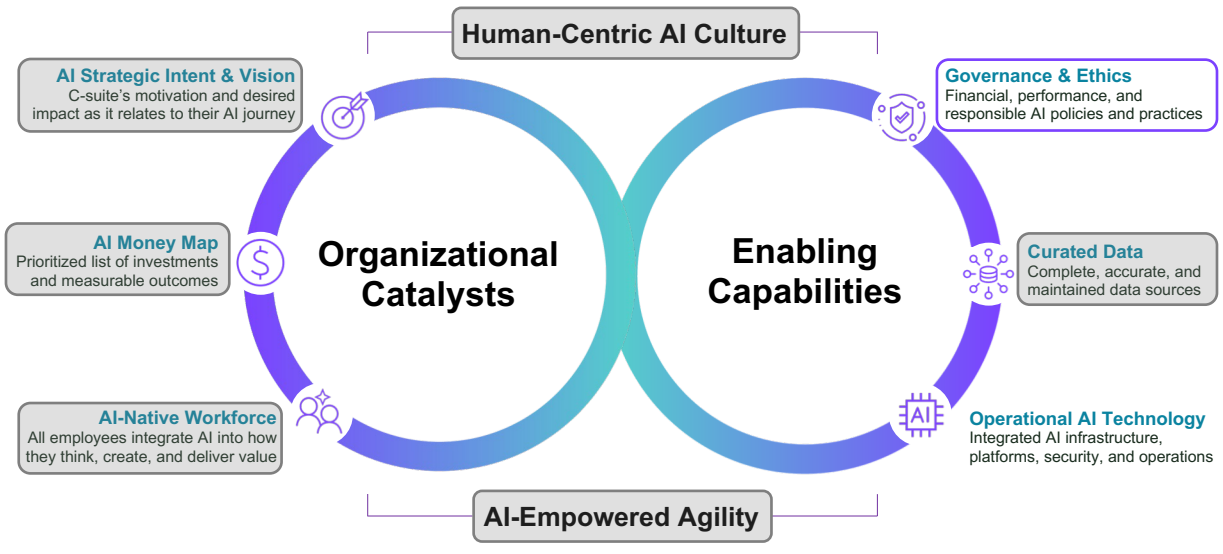

SESSION 10

Governance & Ethics

How can we utilize AI safely, ethically, and with less risk?

101

How can we utilize AI safely, ethically, and with less risk?

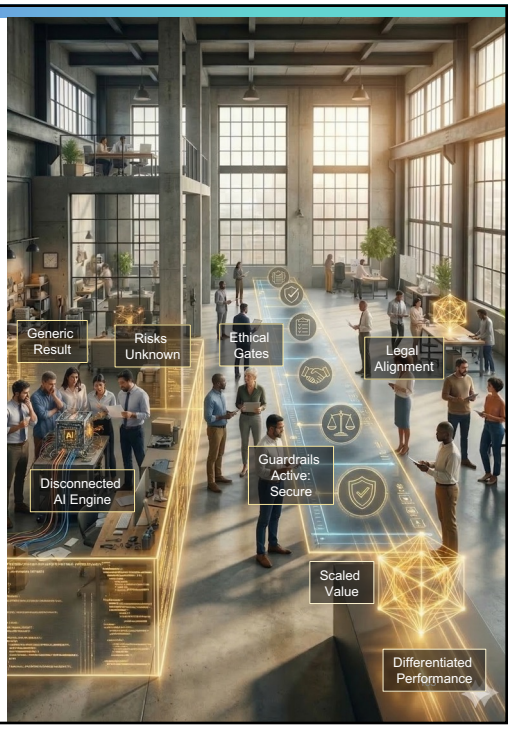

102

Guardrails Enable Acceleration

Governance and Ethics define how the organization ensures AI is used responsibly and stays aligned with its legal obligations, risk tolerance, and values as it scales.

Generative AI introduces risks that traditional controls were not designed to manage. Leaders must set clear guardrails, model responsible use, and actively monitor outcomes in their area. Otherwise, the organization risks legal exposure, financial waste, and loss of trust.

103

AI Financial Governance

Traditional Software (SaaS)

- **Cost Model:** Fixed License / Per Seat
- **Scaling:** Predictable step-function. Costs only rise when you add users
- **Governance:** Annual budget
- **Risk:** Unused licenses (waste).

Generative AI

- **Cost Model:** Variable / Per Token
- **Scaling:** Volatile. An inefficient prompt used by 1,000 users scales costs instantly
- **Governance:** Metering - requires monitoring usage and model routing
- **Risk:** Runaway consumption (liability).

Governance Imperative: Procurement must shift from negotiating seat price to negotiating **rate limits** and **indemnification** (protections from IP infringement claims).

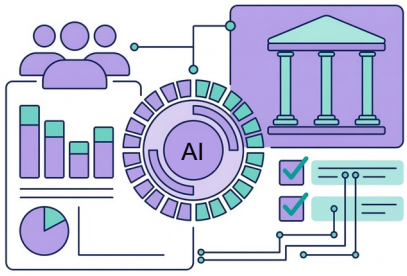

104

104

AI Performance Governance

New Performance Metrics

- **Grounding:** Did the AI correctly cite the provided source data? (Anti-Hallucination) .
- **Relevance:** Did the output actually answer the user's specific prompt?
- **Drift Detection:** Is the model's accuracy degrading over time as data changes?

The Operational Shift

- **Old IT Metric:** "Is the system available?" (99.9% Uptime)
- **New AI Metric:** "Is the answer accurate?" (Grounding Score > 0.9)

AI-Native Training / © Scaled Agile, Inc.

105

Managing AI Risk with a Responsible AI framework

- **Responsible AI** is the practice of creating and managing AI systems in an ethical, transparent, and compliant way, focusing on human values, fairness, safety, and accountability.

Trustworthy

- Privacy
- Security
- Resilience
- Reliability
- Accuracy

Explainable

- Transparency
- Interpretability
- Accountability

Human Centric

- Safety
- Fairness
- Ethics
- Inclusiveness
- Sustainability
- Compliance

AI-Native Training / © Scaled Agile, Inc.

106

Ecosystem of AI Governance & Ethics Frameworks

Guidance & Research

- **RAI Institute** (RAISE)
- **Universities** (Harvard, MIT, Stanford)
- **Consulting/Tech** (McKinsey, BCG, Gartner, Google, OpenAI)

Standards Bodies

- **NIST** (AI RMF)
- **ISO** (42001)
- **IEEE** (7000 Series)
- **WEF** (AIGA)

Laws & Precedent

- **EU AI Act** (2024)
- **State Laws** (CA, CO USA)
- **Court Rulings** (ex. Air Canada)

AI-Native Training / © Scaled Agile, Inc.

107

AI Governance & Ethics Frameworks Comparison

Feature	EU AI Act (Regulation)	NIST AI RMF (Risk Framework)	ISO 42001 (Management Standard)
What is it?	A legally binding regional law structuring the AI market.	A voluntary guidance document for managing AI risk.	An international standard for certifying an AI management system.
Legal Status	**Mandatory** (for EU market access). Significant penalties for non-compliance.	**Voluntary** (but widely regarded as the "Standard of Care" in the US).	**Voluntary** (used for formal third-party certification).
Key Focus	Categorizing risk levels (Unacceptable, High, Limited) and banning certain uses.	A lifecycle approach to risk: Govern, Map, Measure, Manage.	Establishing processes, policies, and documentation for auditability.
Primary Analogy	The "Speed Limit Law" you must obey.	The "Driver's Education Manual" teaching you how to drive safely.	The "Driver's License" proving you passed the test.

AI-Native Training / © Scaled Agile, Inc.

108

Practical AI Governance Actions

Institutionalize Accountability - Establish an AI Governance Council (Legal, IT, Business) with clear decision-making authority and oversight responsibility for AI.

Adopt Risk-Based Classification - Do not treat all AI equally. Triage every use case (Low, High, Unacceptable) aligned with NIST or EU AI Act standards.

Operationalize Guardrails (LLMOps) - Move governance into code. Implement automated filtering for PII, toxicity, and rate limits before the user sees the output.

Secure the Supply Chain - Treat AI vendors like critical suppliers. Require indemnification, data usage rights, and transparency on training data.

Emphasize "Human-in-the-Loop" - Define precise thresholds where human review is non-negotiable where possible (e.g., high-value contracts, hiring decisions).

Build a "Critical Thinking Culture" for AI – In your workforce upskilling strategy, train employees to interrogate and challenge AI responses, not just use it. AI literacy is now a baseline cybersecurity requirement.

AI-Native Training / © Scaled Agile, Inc.

My AI Governance Sphere of Influence

10 min

- Identify your role(s) in your organization's AI governance strategy. Consider each role you identify through these four lenses:
  - **Own** (I make the decision)
  - **Lead** (I must guide my team to take specific actions)
  - **Influence** (I provide data/feedback to the decision-maker)
  - **Follow** (I must adhere to the dictated policy)
- Use half of the timebox to build your individual lists, then the second have sharing with your table/breakout group.

AI-Native Training / © Scaled Agile, Inc.

AI-NATIVE LEADER

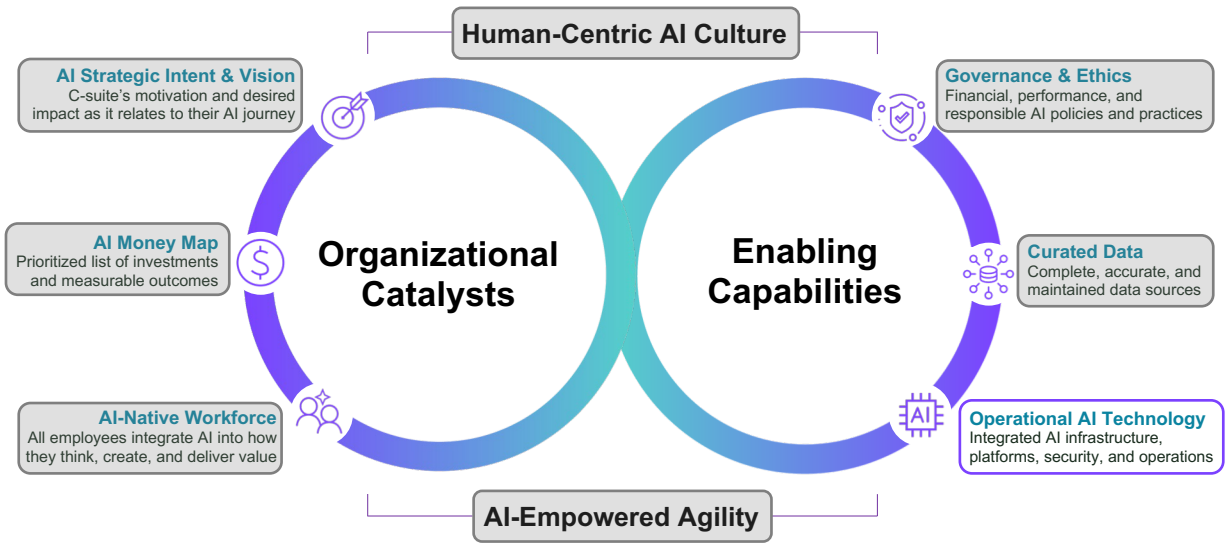

SESSION 11

Operational AI Technology

What technology investments are needed for our AI strategy? (Continued)

111

What technology investments are needed for our AI strategy? (cont.)

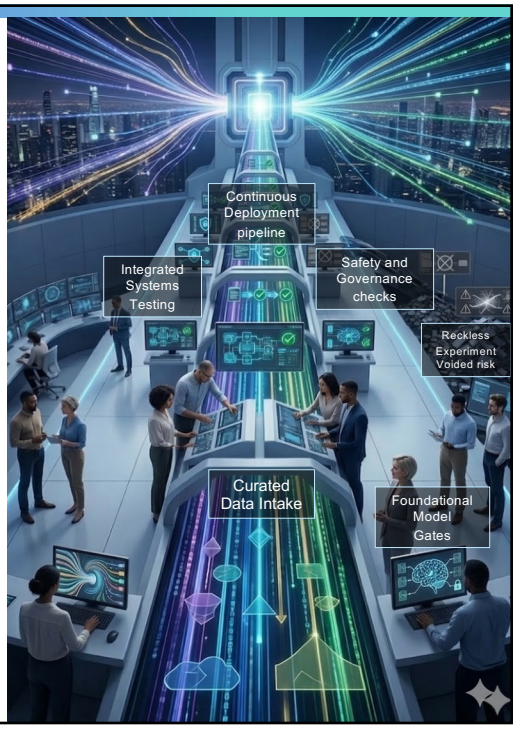

112

Operationalizing AI at Scale

Operational AI Technology is the capability to deploy AI solutions into real production environments and run them reliably, securely, and at scale.

Selecting a model is relatively easy. Sustaining safe, reliable, and scalable AI in production requires systems thinking and operational discipline. Leaders must ensure that these foundations exist, or AI initiatives will stall, create avoidable risk, or fail to scale.

113

Operating AI at Scale

Building AI is easy. Running AI reliably at scale is the real challenge.

- **Reliability:** AI systems must produce consistent results and be monitored over time
- **Security and Access Control:** AI must interact safely with enterprise data and systems
- **Integration:** AI systems must be able to connect with existing applications and workflows
- **Monitoring and Oversight:** Organizations must detect errors, drift, misuse, and unexpected behavior

114

Leadership Responsibilities in Operational AI

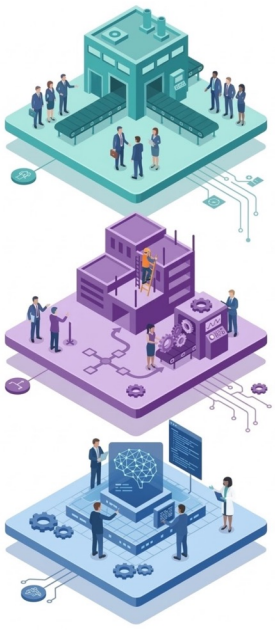

Leaders Must Ensure:

- **Operational Foundations Exist**
  - AI systems can run securely and reliably
  - Data access and controls are defined
- **Clear Ownership**
  - Who monitors AI behavior?
  - Who responds to failures?
- **Sustainable Operations**
  - Costs are understood and managed
  - Systems are maintained and updated over time
- **Enterprise Integration**
  - AI supports real workflows, not isolated experiments

115

Build vs Buy vs Hybrid

- **Buy**: faster time to market
- **Build**: strategic differentiation, unique workflows, deeper control
- **Hybrid**: buy the platform, build the AI solutions on top (most common approach)
- Most enterprises buy the infrastructure and models and build the workflows and applications.

116

Cost in Operational AI

- **Model Usage**: costs to run AI models (per token or subscription)
- **Data Systems**: storing & retrieving enterprise knowledge
- **Infrastructure**: cloud platforms, tools, and integrations
- **Operations**: monitoring, governance, and maintenance

117

Operational AI Exercise – Agentic Workflow

10 min

Prompt: ” Our company wants to deploy an AI agentic workflow that prepares executive meeting briefings. The agent gathers internal reports, retrieves CRM updates, analyzes market news, drafts the briefing, and sends it to leaders before meetings.
What systems, operational capabilities, and major cost drivers would be required to run this reliably at scale inside a company?”

1. Ask the AI the prompt
2. Review the systems and operational components it suggests
3. Identify:
   - Primary operational capabilities required
   - Top 2-3 cost drivers
   - What factors could cause costs to scale unexpectedly?

Follow-up Prompt: ”What risks or operational failures could occur if these systems or controls are missing?”

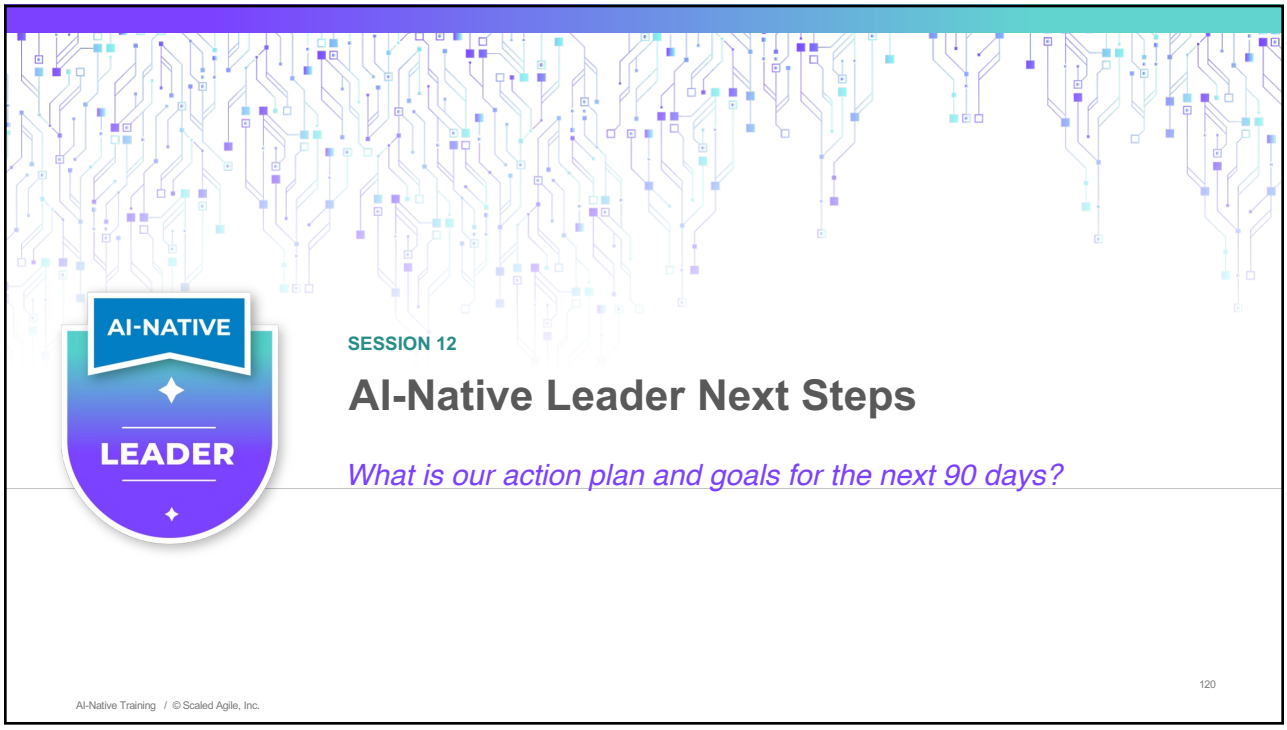

118

Operational AI Questions Every Leader Should Ask

- If this system makes a mistake or goes down, how will we detect it, and who fixes it?
- What will cause costs to grow as usage increases, and how are we controlling that?
- Who is responsible for monitoring, improving, and governing this after it launches?
- Are we strengthening our long-term capability, or locking ourselves into a vendor we can't easily leave?

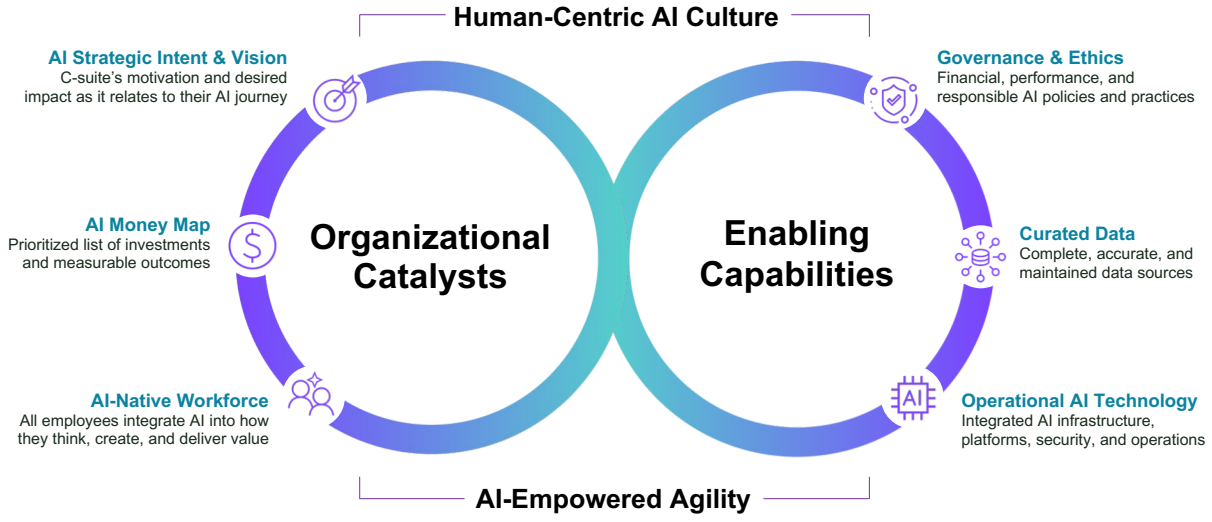

AI-Native Training / © Scaled Agile, Inc.

119

120

What is your action plan and goals for the next 90 days?

AI-Native Training / © Scaled Agile, Inc.

121

Heatmap Revisited

10 min

Element	Original Rating	Degree of Variance	Rating based on what you know now
AI Strategic Intent & Vision	3.0	.5	
AI Money Map	3.0	.5	
AI-Native Workforce	3.0	.5	
Governance & Ethics	3.0	.5	
Curated Data	3.0	.5	
Operational AI Technology	3.0	.5	
Human-Centric AI Culture	3.0	.5	
AI-Enabled Agility	3.0	.5	

AI-Native Training / © Scaled Agile, Inc.

122

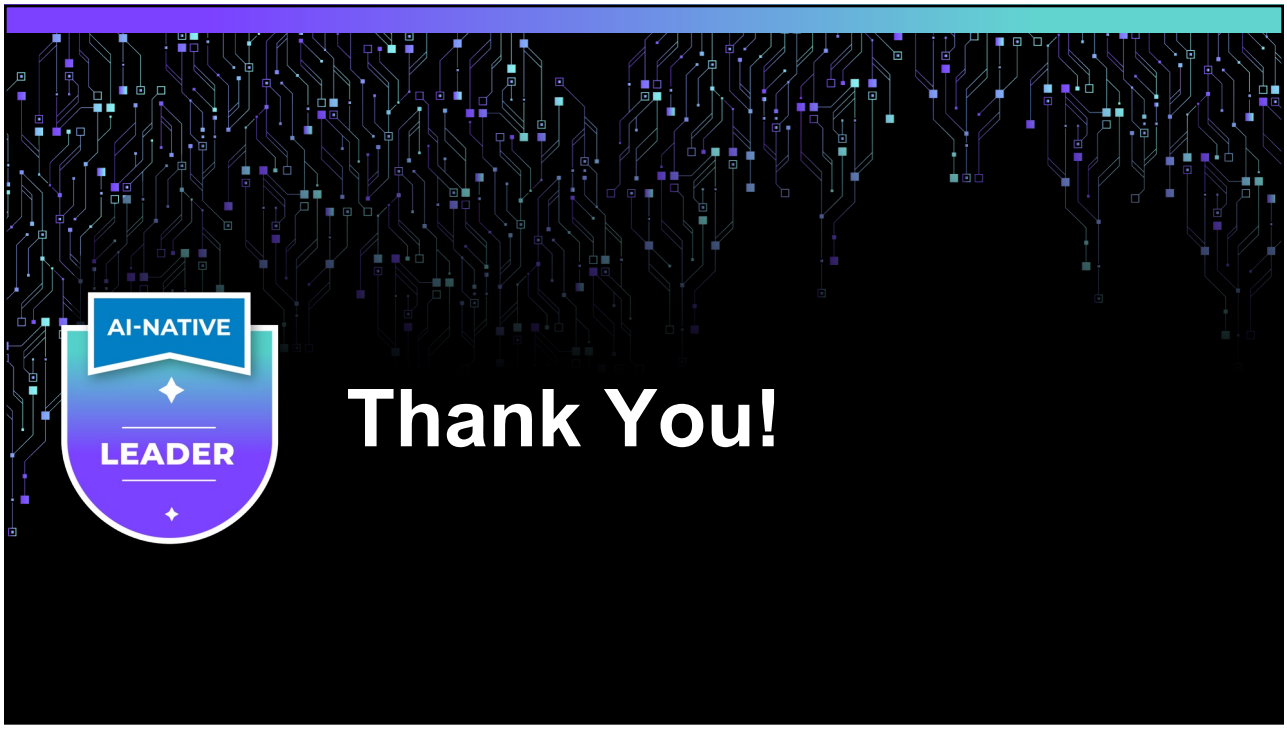

Making it personal

5 min

- Look at the elements you prioritized as the most important for your organization to focus on to become an AI-Native Organization.
- Now consider your role as a leader, and what specific, tangible things you can do within your scope of authority to contribute to the needed improvements. Be prepared to share your highest priority action with the rest of the cohort. Be as specific as possible (who, what, when, etc.)

AI-Native Training / © Scaled Agile, Inc.

123

124

Additional Case Studies

125

AI Success Stories: Walmart

The Challenge: Thousands of "long-tail" supplier contracts went unnegotiated because it was too expensive to assign human buyers to smaller vendors, leaving millions in value on the table.

The Solution:

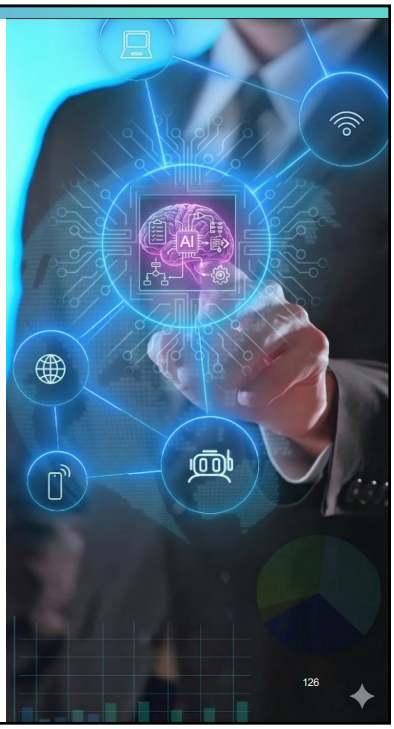

- Deployed **Autonomous Negotiation Agents** that contact suppliers and independently bargains price and terms via chat.
- Can now adjust terms across thousands of vendors in days, not years.

The Results

- **68% Success:** The AI successfully closes deals with majority of suppliers.
- **3% Savings:** Average gain on previously unmanaged contracts.
- **Speed:** Negotiation cycles reduced from months to **11 days**.
- **Supplier relationship:** Up to 90% prefer negotiating with the AI agent

Leader Focus: *Operational AI Technology + AI-Empowered Agility*

(Source: HBR, Bloomberg, MIT)

126

AI Success Stories: Moderna

The Challenge: Sustain pandemic-era speed in drug discovery while scaling operations. Move from a "digital" biotech to an "AI-first" organization.

The Solution:

- CEO mandated AI as the primary lever for business resilience, moving from a "digital biotech" to an "AI-first" operating model.
- Deployed **mChat** (internal ChatGPT) and upskilled the entire enterprise, allowing non-technical employees to build over 750 custom GPTs.

The Results:

- **Cost Removal:** AI-driven efficiencies contributed to a massive 27% reduction in operating costs year-over-year.
- **Universal Adoption:** Reached 80%+ daily active usage across the workforce.
- **Velocity:** Reduced clinical and regulatory drafting from days to minutes.Success

Leader Focus: *Strategic Intent & Vision + AI-Native Workforce*

(Source: WSJ, OpenAI, Moderna Q3 2025 Earnings)

127

AI Success Stories: Intuit

The Challenge: Consumers and small businesses struggle with complex financial data, leading to high abandonment rates and unpaid invoices in tax and accounting software.

The Solution:

- Embedded **Intuit Assist**, a GenAI assistant, across the ecosystem to provide personalized financial action plans and automations.
- Seamlessly integrated AI to route complex edge-cases directly to human financial experts.

The Results

- **Conversion:** Achieved a 10% higher payment conversion rate on overdue invoices using AI-generated reminders.
- **Feature Adoption:** AI-personalized marketing automations are 50% more likely to be activated by users.
- **Ecosystem Growth:** Connecting users to AI-assisted human experts drove a 20-point higher product attach rate.

Leader Focus: *AI Money Map + Human-Centric AI Culture*

(Sources: Intuit Q2 2025 Earnings Call, Forrester)

128

AI Success Stories: Duolingo

The Challenge: Traditional language apps lacked the dynamic, conversational practice of a human tutor. Duolingo needed to bridge this gap to unlock a higher-value premium subscription tier.

The Solution:

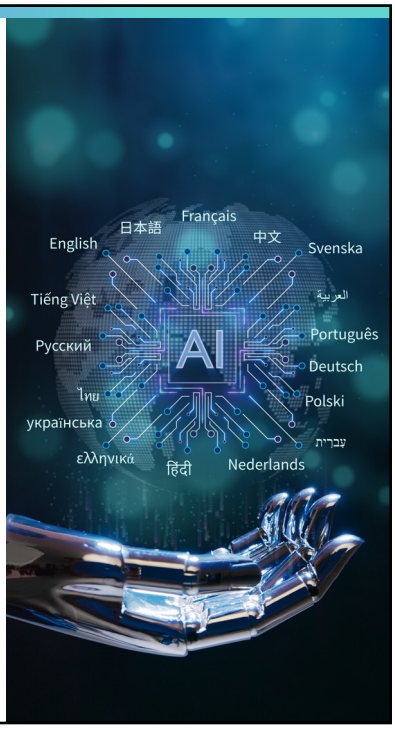

- Launched **Duolingo Max**, featuring GenAI "Roleplay" and "Explain My Answer" capabilities.
- Rapidly prototyped these features using LLMs rather than building conversational models from scratch.

The Results

- **Revenue Milestone:** AI-driven premium upgrades helped push 2025 total revenue past **$1.03 Billion** (up 39% YoY).
- **Premium Conversion:** Duolingo Max rapidly grew to capture **9% of the entire paid subscriber base**.
- **Subscriber Scale:** Total paid subscriber base grew 28% YoY to **12.2 million users**.

Leader Focus: *AI Money Map + AI-Empowered Agility*

(Sources: Duolingo Q4 2025 Shareholder Letter, ClassCentral)

129

AI Success Stories: Carrefour

The Challenge: Faced with rising operational costs and shifting consumer expectations, the global supermarket giant needed to transition from a traditional brick-and-mortar retailer to a "data-centric, digital-first" enterprise.

The Solution:

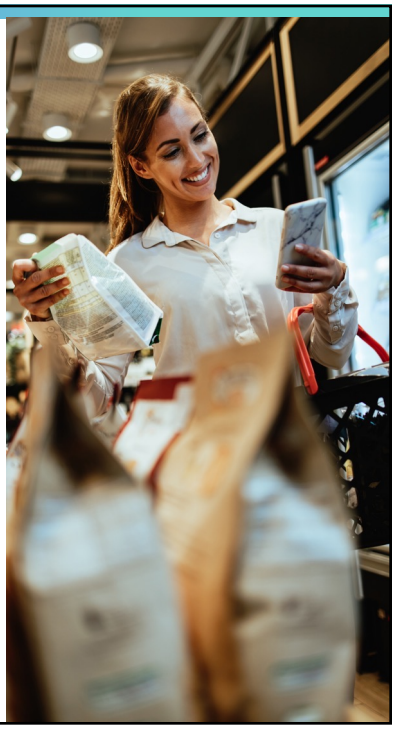

- Launched **Hopla**, a GenAI shopping assistant that helps customers build personalized, budget-friendly baskets, while using AI to enrich thousands of eCommerce product descriptions.
- Executed a €3 billion digital transformation plan, embedding AI deeply into supply chain logistics, dynamic pricing, and internal procurement to shift managers from task execution to strategic leadership.

The Results

- **Operating Income:** Enterprise AI and digital initiatives are on track to add an additional **€600 million** to recurring operating income by 2026.
- **E-commerce Scale:** Driving a massive acceleration in digital sales, pacing to triple e-commerce GMV to **€10 billion**.
- **Customer Loyalty:** AI-driven personalization and friction-less shopping contributed to a measurable **5-point increase** in Group NPS.

Leader Focus: *Strategic Intent & Vision +AI Money*

(Sources: Carrefour Press Release, Publitas, Diginomica)

130

AI Success Stories: JPMorgan Chase

The Challenge: Strict banking regulations made public AI tools a compliance risk, but "opting out" of AI posed an existential threat to innovation.

The Solution:

- Built **LLM Suite**, a secure internal portal that wraps external models (like GPT-4) in proprietary compliance guardrails.
- CEO Jamie Dimon compared AI's impact to the steam engine, mandating safe, rapid adoption.

The Results

- **$1.5B–$2B Realized Value:** Sourced annually from fraud mitigation, operational productivity, and new revenue generation.
- **150,000+ Users:** Rapid, safe adoption across the enterprise.
- **Performance Impact:** Drove a 20% sales boost in Wealth Management and automated 360,000 legal work hours.
- **Leader Focus:** *Governance & Ethics + Strategic Intent*

(Sources: CIO Dive, Entrepreneur, JPMorgan Chase 2026 Investor Day)

131

AI Success Stories: Mercedes-Benz

The Challenge: Legacy rule-based in-car voice assistants were rigid and frustrating, leading to low consumer adoption and increased driver distraction when users reverted to touchscreen menus.

The Solution:

- Integrated ChatGPT directly into the Mercedes-Benz User Experience (MBUX) infotainment hardware.
- Launched as an over-the-air (OTA) update to over 900,000 vehicles, instantly turning existing physical hardware into a GenAI platform.

The Results

- **Engagement Surge:** Drivers are twice as likely to interact with the vehicle using the GenAI functionality compared to the legacy system.
- **Safety & Experience:** Reduced driver distraction by enabling complex, multi-step queries without taking eyes off the road.
- **Scale:** Transitioned from a regional beta to a global standard across new vehicle lines.

Leader Focus: *AI Money Map + AI-Empowered Agility*

132

Detailed Courseware Slides

133

Thinking and Working Differently in the Age of AI

AI-NATIVE FOUNDATIONS

Ignite Fluency and Confidence Across Your Workforce

Audience All professionals—business, product, delivery, and operations

Format 2-day in-person immersive training

Outcome Your workforce is equipped to confidently navigate change, use AI

What You'll Learn

- Grasp the **EDGE™ Imperative**—Exponential, Disruptive, Generative, and Emergent forces transforming work
- Understand AI, ML, GenAI, LLMs, RAG, and intelligent agents—in plain language
- Master safe and effective AI prompting with proven techniques
- Apply the **7 AI-Native Success Factors** to drive value from day one
- Redesign one of your personal workflows using AI
- Design a personal **30-60-90 day AI plan** and pitch use cases with confidence

134

For Realizing Value from AI Investments

Translate AI Potential into Real-World Business Results

Audience Team leads, change agents, digital strategists, and transformation owners driving AI initiatives

Format 3-day hands-on experience that equips you to apply the AI-Native value discovery and delivery process in any context, whether through a focused workshop over several days or through an extended, informal approach over weeks or months.

Outcome Participants learn to lead cross-functional teams through identifying, shaping, and delivering high-value AI opportunities. They'll build the capability to navigate complex environments, avoid common AI pitfalls, and guide work from early discovery into sustained business impact.

What You'll Learn

- Spot and overcome common blockers like hype traps, misaligned priorities, and stalled pilots
- Apply the AI-Native value discovery process flexibly—facilitating structured workshops or embedding it into ongoing team practices
- Translate AI concepts into business language to engage non-technical stakeholders and secure sponsorship
- Build stakeholder maps, charters, and implementation plans that accelerate execution
- Guide initiatives through lean cycles and act as an impediment remover to ensure live delivery

135

For Equipping Leaders to Guide an AI-Native Organization

A practical workshop on translating AI ambition into strategy, investment discipline, and sustainable results

Audience Leaders at all levels, including:

- VPs, Directors, and senior leaders who oversee teams, initiatives, budgets, or transformation programs
- Business unit leaders, PMOs, and transformation sponsors seeking to align AI initiatives with strategy and P&L impact
- Anyone who must evaluate, approve, or manage AI initiatives across the enterprise

Format 1-day immersive training

What You'll Learn

- **The Landscape, Lexicon & AI-Native Opportunity**
  Move beyond the hype to focus on business logic
- **Governance & The "Standard of Care"**
  Realistically assess your exposure to the "Three Buckets of Risk": Legal, Operational, and Brand
- **The Human Factor, Workforce & Leadership**
  Learn how to pivot your workforce from passive "users" of tools to active "creators" of value.
- **Infrastructure, Data & Enabling Capabilities**
  Shift the technology discussion from features to capital allocation.
- **The AI Money Map & AI Leadership Roadmap**
  Translate strategy into action by building your AI Money Map—a value-ranked portfolio of AI

136
